Fockety Focketyk7v02eib84-11

Fockety Paraffin Wax Machine User Manual

Model: Focketyk7v02eib84-11

INTRODUCTION

Thank you for choosing the Fockety Paraffin Wax Machine. This device is designed to provide a soothing and moisturizing paraffin wax treatment for your hands, feet, and elbows. Regular use can help soften dry skin and provide relaxation. Please read this manual thoroughly before operating the machine to ensure safe and effective use.

IMPORTANT SAFETY PRECAUTIONS

- Always unplug the machine from the power outlet when not in use, before cleaning, or before adding/removing wax.
- Do not immerse the machine in water or any other liquid.
- Keep out of reach of children.
- Do not operate the machine if the power cord or plug is damaged.
- Ensure the machine is placed on a stable, heat-resistant surface.
- Do not add water or other liquids to the wax pot. Only use paraffin wax specifically designed for paraffin baths.
- The wax will be hot. Always check the wax temperature before dipping hands or feet to avoid burns. The melting temperature of the wax is around 70 to 80°C. Allow it to cool to a comfortable temperature before use.
- Do not use on broken, irritated, or sensitive skin. Consult a doctor if you have any skin conditions or circulatory problems.
- Use the provided heat insulation board to prevent direct contact with the hot bottom of the pot.

PACKAGE CONTENTS

Please check the package to ensure all items are present:

- 1 x Paraffin Wax Machine Host
- 1 x Lid
- 1 x User Manual
- 1 x Heat Insulation Board

PRODUCT OVERVIEW

Familiarize yourself with the components of your Fockety Paraffin Wax Machine:

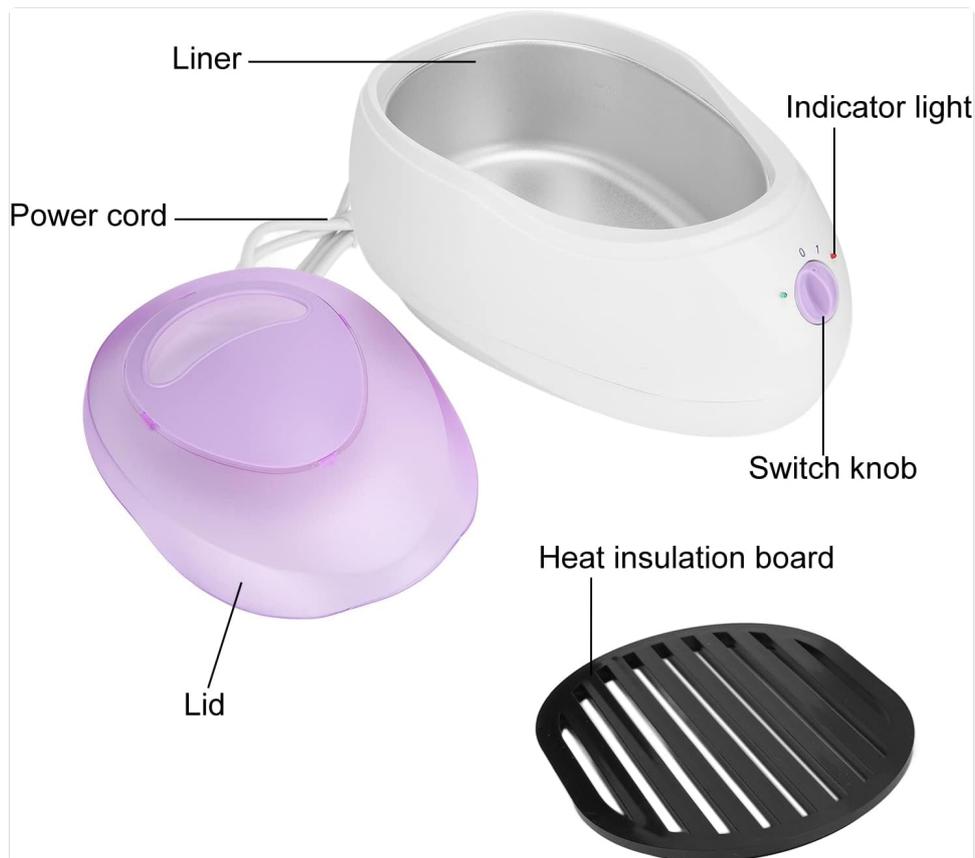

Figure 1: Main components of the Paraffin Wax Machine. This image shows the machine with its lid, the internal liner, the power cord, the indicator light, the switch knob, and the separate heat insulation board. Each part is labeled for easy identification.

- **Liner:** The internal aluminum alloy pot where the paraffin wax is melted. Designed for constant temperature melting.
- **Lid:** Covers the wax pot to retain heat and prevent contamination.
- **Power Cord:** Connects the machine to the electrical outlet.
- **Indicator Light:** Illuminates to show the machine's operational status.
- **Switch Knob:** Controls the power (On/Off) and heating settings.
- **Heat Insulation Board:** A separate board placed at the bottom of the wax pot to prevent direct contact with the hot surface and provide anti-scalding protection.

Eco friendly heat insulation board
Anti scalding effect

Figure 2: The Eco-friendly heat insulation board. This slatted black board is designed to be placed inside the wax machine to protect users from direct contact with the hot bottom surface.

SETUP

1. **Placement:** Place the paraffin wax machine on a flat, stable, and heat-resistant surface. Ensure it is away from water sources and flammable materials.
2. **Insert Heat Insulation Board:** Place the heat insulation board at the bottom of the aluminum alloy liner inside the machine. This is crucial for safety.
3. **Add Paraffin Wax:** Cut the paraffin wax block into small pieces or break it into smaller chunks. Place the wax into the aluminum alloy liner. Do not add water.
4. **Wax Level:** Ensure the wax level is between the "Highest wax level" and "Lowest wax level" marks indicated inside the liner.

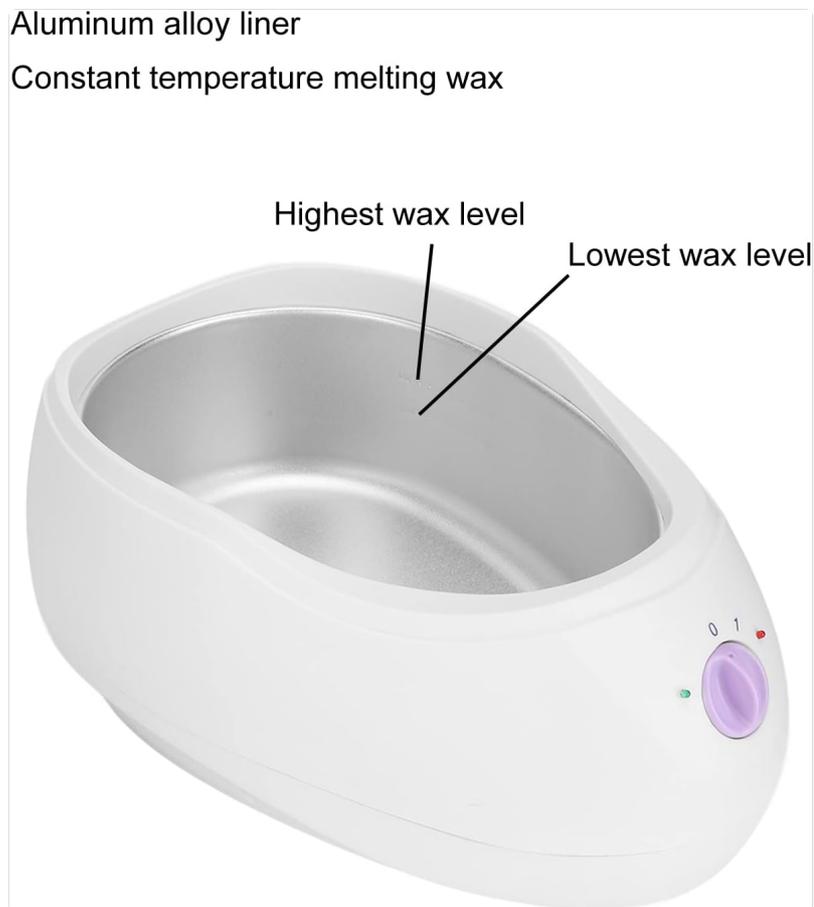

Figure 3: Internal view of the aluminum alloy liner with wax level indicators. This image highlights the recommended maximum and minimum wax levels for safe and efficient operation.

5. **Connect Power:** Plug the power cord into a standard 110V US electrical outlet.

Figure 4: The paraffin wax machine connected to its power cord, with the heat insulation board shown separately. This illustrates the machine ready for power connection.

OPERATING INSTRUCTIONS

Follow these steps for a safe and effective paraffin wax treatment:

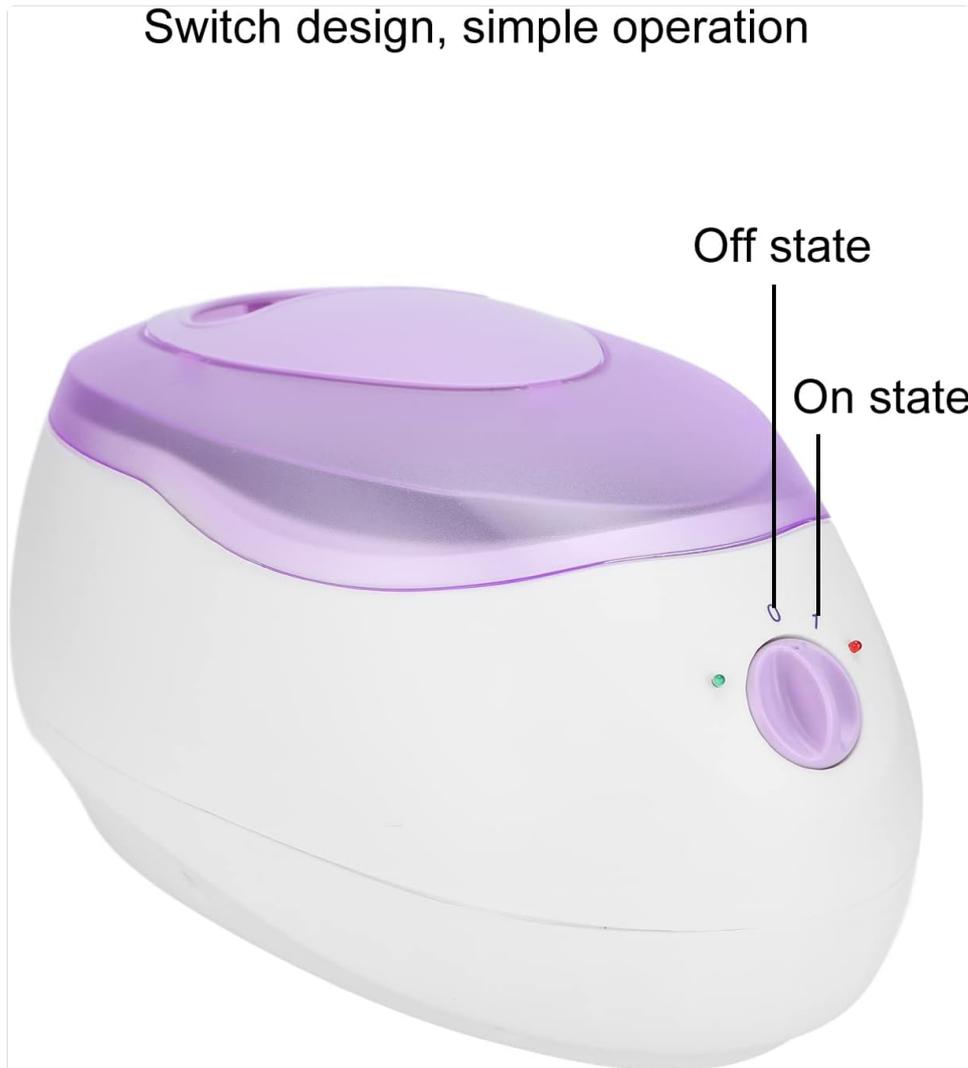

Figure 5: The switch knob for controlling the machine's power. Position '0' is off, and '1' is on, initiating the heating process.

1. **Turn On:** Rotate the switch knob from '0' (Off state) to '1' (On state). The indicator light will illuminate, signifying that the machine is heating.

Figure 6: Detailed view of the switch knob and indicator lights. The green light indicates power, and the red light indicates heating.

2. **Melt Wax:** Allow approximately 10 minutes for the wax to fully melt. You may add a few drops of essential oil to the melted wax to increase lubricity, if desired.
3. **Unplug and Cool:** Once the wax is completely melted, unplug the power supply. This allows the wax to cool slightly to a safe and comfortable temperature for dipping. Ensure the heat insulation board is in place to prevent burns from the bottom of the pot.
4. **Check Temperature:** Before dipping, test the wax temperature on a small area of your skin (e.g., wrist) to ensure it is comfortable and not too hot.
5. **Dip Hands/Feet:** When the temperature is suitable, slowly dip your hand or foot into the wax for about 5 seconds. Remove and allow the wax to solidify slightly. Repeat this process approximately 5 times to build up a thick layer of wax. If you cannot soak, you can use a brush to apply the wax.

Figure 7: Illustration of the paraffin wax treatment process. The left panel shows a hand being dipped into the warm wax, and the right panel shows a hand covered in wax, possibly with a protective glove.

6. **Gloves (Optional):** For easier peeling, you may put on disposable gloves or cotton gloves over the waxed area.
7. **Relax:** Allow the wax to remain on your skin for about 10 minutes to maximize moisturizing and softening effects.
8. **Remove Wax:** Gently peel off the wax. The removed wax can be placed back into the pot for reuse (can be used repeatedly 25-30 times).

STEPS FOR USAGE

- 1) Cut the wax block into small pieces, or break it into pieces.
(Remember to pick up the heat shield and do not put water).
- 2) The wax melts in about 10 minutes, drop a few drops of essential oil in, mainly to increase lubricity.
- 3) After the wax completely melts, unplug the power supply and put the heat shield in it to prevent your hands from being burned by the bottom of the pot.
- 4) When the temperature is right, put your hand in, soak for about 5 seconds, and repeat 5 times (if you can't soak, you can use a brush).
- 5) Put on disposable gloves and put on cotton gloves for easy peeling. After finishing, peel the wax back into the pot (can be used repeatedly 25-30 times)
- 6) The wax can be peeled off after about 10 minutes, and contrast the effect.

Figure 8: A visual guide to the usage steps for the paraffin wax machine. This image summarizes the process from preparing the wax to applying and removing it, emphasizing key safety points like using the heat shield and not adding water.

MAINTENANCE

- **Cleaning:** After use, allow the remaining wax to cool and solidify. Once solid, you can usually lift the entire block of wax out of the liner. If necessary, gently scrape any remaining wax from the liner using a non-abrasive tool.
- **Exterior Cleaning:** Wipe the exterior of the machine with a soft, damp cloth. Do not use abrasive cleaners or immerse the unit in water.
- **Storage:** Store the machine in a cool, dry place when not in use.

TROUBLESHOOTING

Problem	Possible Cause	Solution
---------	----------------	----------

Problem	Possible Cause	Solution
Machine does not turn on.	Not plugged in; power switch off; power outage.	Ensure the power cord is securely plugged into a working outlet. Turn the switch knob to '1'. Check your household's power supply.
Wax is not melting.	Machine not on; insufficient heating time.	Confirm the machine is turned on and the indicator light is active. Allow sufficient time (approx. 10 minutes) for the wax to melt completely.
Wax is too hot.	Insufficient cooling time after melting.	Unplug the machine and allow the wax to cool down to a comfortable temperature before use. Always test the temperature before dipping.

SPECIFICATIONS

Brand: Fockety

Model: Focketyk7v02eib84-11

Material: ABS (body), Aluminum Alloy (liner)

Color: White (machine body), Purple (lid)

Capacity: 2.3 Liters

Input Voltage: 110V (US Plug)

Melting Temperature: Approximately 70-80°C (after heating)

Package Dimensions: 15.2 x 10.8 x 8.1 inches

Item Weight: 2.35 pounds

WARRANTY AND SUPPORT

For any questions, concerns, or support regarding your Fockety Paraffin Wax Machine, please contact the manufacturer or your retailer. Refer to your purchase documentation for specific warranty details and contact information.
