## 4. MAINTENANCE

### 4.1 Cleaning the Filter and Internal Lens

Regular cleaning of the air filter and internal lens is crucial for maintaining optimal performance and image quality. The filter should be cleaned monthly or as needed. The internal lens can be gently cleaned with a dry cotton swab or one moistened with alcohol.

*Video 4.1: A guide on how to remove and clean the internal lens and dust filter of a similar projector model (P65). This maintenance step helps prevent dust accumulation and ensures clear projection.*

## 5. TROUBLESHOOTING

If you encounter any issues with your WiMiUS P63 projector, please refer to the following common troubleshooting tips:

- **No Power:** Ensure the power cable is securely connected to both the projector and the power outlet. Try a different outlet.
- **No Image:** Check the input source. Make sure the correct HDMI or other input is selected. Verify that the lens cap is removed.
- **Blurry Image:** Use the electric focus function on the remote control to adjust the image sharpness. Ensure the projector is placed at an appropriate distance from the screen.
- **Image Distorted (Trapezoid Shape):** The projector features automatic keystone correction. If the image is still distorted, manually adjust the keystone settings in the projector menu.
- **No Sound:** Check the volume settings on both the projector and the connected device. Ensure that the audio output is correctly configured. If using Bluetooth, verify the connection.
- **Wi-Fi/Bluetooth Connection Issues:** Ensure the projector is within range of your Wi-Fi router or Bluetooth device. Restart both the projector and the device you are trying to connect.
