6. MAINTENANCE

- **Cleaning:** Wipe down metal and wood surfaces with a soft, damp cloth. For the PU upholstered headboard, use a mild fabric cleaner if necessary, testing on an inconspicuous area first.
- **Hardware Check:** Periodically inspect all bolts and screws to ensure they remain tight. Re-tighten as needed to maintain the bed frame's stability and prevent squeaking.

- **Squeaking Noise:** Check all bolts and screws for tightness. Loose connections are the most common cause of squeaking. Ensure the bed frame is on a level surface.
- **Unstable Frame:** Verify that all components are correctly assembled according to the instructions and that all fasteners are fully tightened. Ensure the center support legs are properly installed and making contact with the

floor.

- **Power Outlets Not Working:** Ensure the bed frame's main power cord is securely plugged into a functional wall outlet. Check the circuit breaker if other outlets in the room are also not working.
