OPERATING INSTRUCTIONS

- **Weight Capacity:** The upper bunk has a maximum weight capacity of 250 pounds. Do not exceed this limit.
- **Mattress Requirements:** Use a twin-size mattress with a recommended thickness of 6-8 inches. A box spring is not required as the bed frame includes 20 metal slats for mattress support.
- **Stair Usage:** The integrated stairs are designed for safe ascent and descent. Ensure children use the stairs properly and do not jump on them.
- **Storage Areas:** Utilize the storage compartments within the stairs and the integrated storage box for organizing books, toys, or other small items. The shelf weight capacity is 50 lbs, and the storage box capacity is 25 lbs.

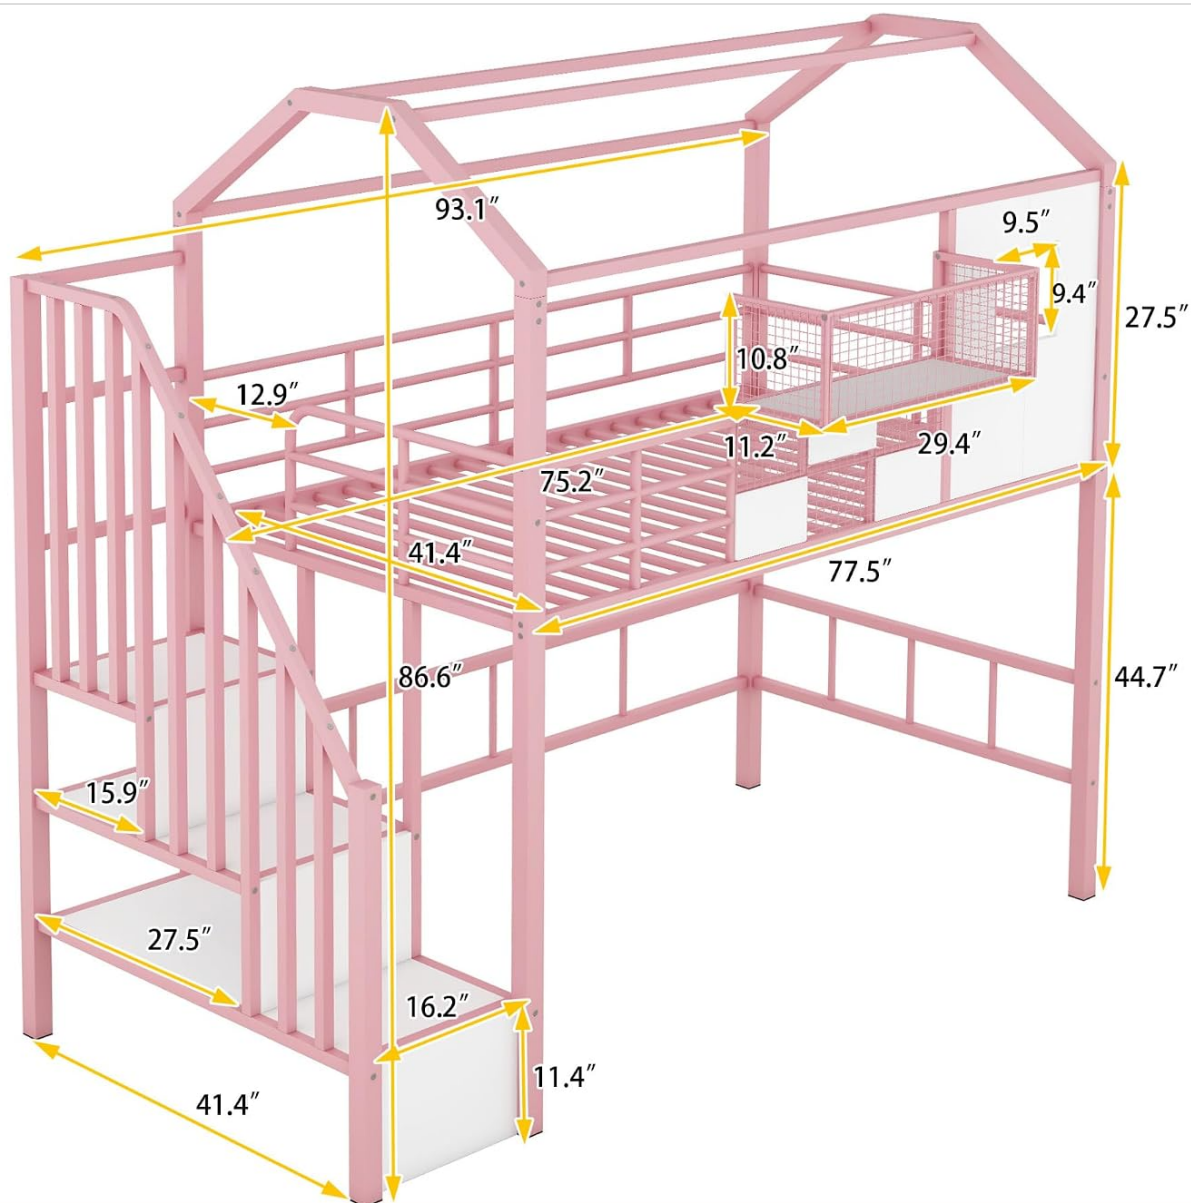

MAINTENANCE

- **Cleaning:** Wipe down the metal frame with a soft, damp cloth. Avoid using harsh chemicals or abrasive cleaners that could damage the finish.
- **Hardware Check:** Periodically inspect all bolts, screws, and connections to ensure they remain tight. Re-tighten any loose hardware to maintain stability and safety.
- **Structural Integrity:** Regularly check the bed frame for any signs of wear, damage, or structural compromise. Address any issues promptly.

TROUBLESHOOTING

- **Bed Wobbles:** If the bed feels unstable or wobbles, check all assembly hardware. Ensure every bolt and screw is fully tightened. Uneven flooring can also contribute to wobbling; consider placing shims under the bed legs if necessary.
- **Squeaking Noises:** Squeaking can often be resolved by re-tightening all connections. If squeaking persists, disassemble and reassemble the affected section, ensuring all parts are correctly aligned and tightened.
- **Parts Don't Align:** If parts do not align during assembly, double-check the orientation of each piece against the assembly diagrams. Sometimes, a slight adjustment or loosening of previously tightened bolts can help align components.
