## SETUP AND INSTALLATION

The installation process for the YBLKY Wall Heater Floor Mounting Kit is straightforward. Follow these steps to securely attach the legs to your wall heater.

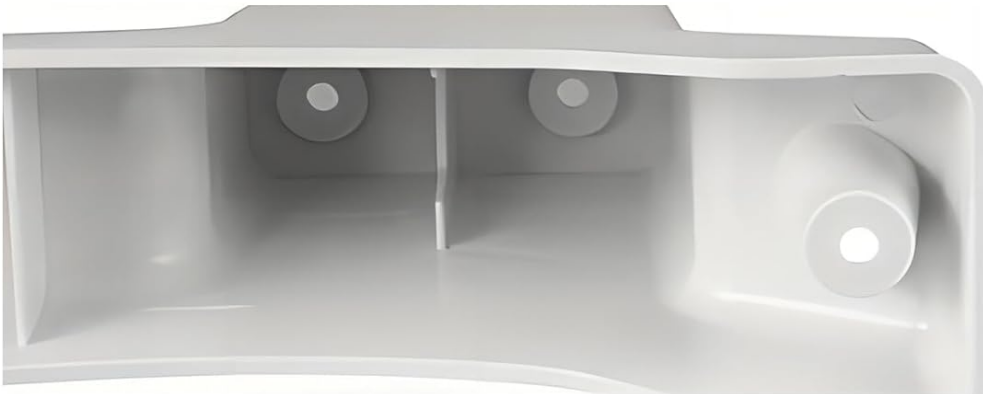

- 1. Prepare the Heater:** Ensure your wall heater is turned off and disconnected from any power or fuel source. Allow it to cool completely if it has been in operation.
- 2. Position the Legs:** Take one gas wall heater leg and align it with the designated mounting points on the base of your wall heater. The legs are designed to fit specific models, ensuring a proper and stable fit.
- 3. Secure with Screws:** Use two of the provided screws to securely attach the leg to the heater. Insert the screws into the pre-drilled holes on the leg and the heater, then tighten them with a screwdriver until snug. Do not overtighten.
- 4. Repeat for Second Leg:** Repeat steps 2 and 3 for the second gas wall heater leg on the opposite side of the heater.
- 5. Verify Stability:** Once both legs are attached, gently place the heater on a flat, level surface. Ensure it stands firmly and does not wobble. The legs are designed to elevate the heater, preventing direct contact with the floor and protecting it from moisture.
