5. Setup (Installation)

The QAZAKY PZ13 carburetor is designed for straightforward installation. It is recommended to consult a service manual for your specific vehicle or equipment for detailed removal and installation procedures. Always ensure the engine is cool and disconnected from any power source before beginning work.

1. **Preparation:** Gather necessary tools. Ensure the engine is off and cool.
2. **Remove Old Carburetor:** Disconnect the fuel line, throttle cable, and choke cable (if applicable). Unbolt the old carburetor from the intake manifold and air filter housing.
3. **Clean Mounting Surfaces:** Thoroughly clean the intake manifold and air filter housing mounting surfaces to ensure a proper seal.
4. **Install New Gasket:** Place the new gasket (included) between the intake manifold and the new carburetor.
5. **Mount New Carburetor:** Position the new QAZAKY carburetor and secure it with the provided screws and mounting bracket. Ensure a snug fit without overtightening.

6. **Connect Components:** Reconnect the fuel line, throttle cable, and choke cable. Ensure all connections are secure and free from leaks.
7. **Install Air Filter:** Attach the new air filter with the clamp to the carburetor's air intake.
8. **Final Check:** Double-check all connections and ensure no tools or debris are left in the engine area.

6. Operating

After successful installation, the engine should start and run smoothly. The carburetor is pre-tuned for general use. If your engine requires specific adjustments, refer to your vehicle's service manual for carburetor tuning procedures. Always

operate your vehicle or equipment in a well-ventilated area.

7. Maintenance

Regular maintenance ensures optimal performance and extends the life of your carburetor and engine.

- **Air Filter:** Regularly inspect and clean or replace the air filter. A clogged air filter can restrict airflow, leading to poor engine performance and increased fuel consumption.
- **Fuel Quality:** Use clean, fresh fuel appropriate for your engine. Stale or contaminated fuel can clog carburetor jets.
- **Fuel Lines:** Check fuel lines for cracks, leaks, or blockages. Replace as needed.
- **Storage:** If storing the vehicle for an extended period, drain the fuel from the carburetor bowl or use a fuel stabilizer to prevent gumming.

8. Troubleshooting

If you encounter issues after installing the carburetor, consider the following common troubleshooting steps:

- **Engine Not Starting:**
  - Check fuel supply: Ensure there is fuel in the tank and the fuel line is not kinked.
  - Spark plug: Inspect the spark plug for fouling or damage.
  - Choke: Ensure the choke is correctly engaged for cold starts and disengaged for warm starts.
- **Poor Engine Performance (Rough Idling, Lack of Power):**
  - Air filter: A dirty air filter can restrict airflow. Clean or replace it.
  - Fuel mixture: The carburetor may require fine-tuning. Refer to your vehicle's service manual.
  - Vacuum leaks: Check for leaks around the intake manifold gasket.
- **Fuel Leaks:**
  - Check fuel line connections: Ensure all fuel lines are securely attached and clamps are tight.
  - Float bowl: Inspect the float bowl gasket for proper sealing.
