- **Gasket Removal (for thorough cleaning):** Some users have noted that the gasket on the blade attachment can be removed for thorough cleaning. Use a non-sharp object (like the loop of a straw or a fork handle) to gently pry back the L-shaped gasket from the plastic lip. Ensure it is re-seated correctly after cleaning to prevent leaks.
- **Motor Base:** Wipe the motor base clean with a damp cloth. Never immerse the motor base in water or any other liquid.

- **Straws:** Use the provided straw cleaning brush to thoroughly clean the inside of the reusable straws.
- **Drying and Storage:** Allow all parts to air dry completely before reassembling or storing. Store the blender in a dry place.

## TROUBLESHOOTING

If you encounter any issues with your BEAST Mini Blender, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Blender does not turn on.	Not plugged in; vessel not properly seated; overheating.	Ensure the power cord is securely plugged into a working outlet. Twist the blending vessel clockwise until it locks into place. If the unit overheated, allow it to cool down for 15-20 minutes before attempting to blend again.
Ingredients are not blending smoothly.	Too little liquid; too many ingredients; ingredients are too large or hard.	Add more liquid. Reduce the amount of ingredients. Cut harder ingredients into smaller pieces. Use the pulse function to break down stubborn ingredients.
Leakage from the blending vessel.	Blade assembly not tightened; gasket improperly seated or damaged.	Ensure the blade assembly is securely tightened onto the vessel. Check the gasket for proper seating and any signs of damage. Replace if necessary.
Unpleasant odor or taste from the blender.	Food residue trapped in gasket or hard-to-reach areas.	Thoroughly clean all components, especially the blade assembly and gasket. Refer to the "Maintenance and Cleaning" section for gasket removal instructions.
