Product Features

- **5 AC Outlets:** Provides power for multiple electronic devices simultaneously.
- **3 USB Charging Ports:** Offers convenient charging for smartphones, tablets, and other USB-powered devices without requiring additional adapters.
- **Surge Protection:** Protects connected devices from power spikes and surges.
- **Overload Protection:** Automatically shuts off power if the connected load exceeds the safe limit, enhancing safety.
- **Space-Saving Tower Design:** Vertical design minimizes desk or floor space usage while providing easy access to all ports.

Safety Information

To reduce the risk of electric shock, fire, or injury, always follow these basic safety precautions:

- Do not exceed the electrical ratings of the power strip. Refer to the specifications section for details.
- Do not use in wet environments or near water.
- Do not disassemble or modify the device.
- Keep out of reach of children.
- Ensure the power cord is fully inserted into a grounded wall outlet.
- Avoid placing the power strip in direct sunlight or near heat sources.
- If the overload protection trips, disconnect some devices before resetting the power strip.

Setup

1. **Unpack:** Carefully remove the power strip tower from its packaging.
2. **Placement:** Place the power strip tower on a stable, flat surface, ensuring adequate ventilation. Its vertical design is ideal for desks or floors where space is limited.
3. **Connect to Power:** Plug the power strip's cord into a standard 125V grounded wall outlet.

4. **Verify Indicators:** Once plugged in, check the indicator lights on the top of the tower. The "GROUNDED" and "PROTECTED" indicators should illuminate, confirming proper grounding and surge protection functionality.

Operating Instructions

1. **Power On/Off:** Use the main ON/OFF switch located on the front of the tower to control power to all connected AC outlets and USB ports. Press the switch to turn power on or off.
2. **Connecting AC Devices:** Plug your devices into any of the 5 AC outlets. Ensure the plugs are fully inserted.
3. **Connecting USB Devices:** Connect your USB charging cables to the 3 USB ports. The ports are designed to provide power for charging compatible devices.
4. **Overload Protection:** If the total power draw of connected devices exceeds the maximum capacity (15 Amps), the overload protection will automatically trip, cutting power to prevent damage. To reset, unplug some devices and then press the ON/OFF switch to restore power.

Maintenance

- **Cleaning:** Disconnect the power strip from the wall outlet before cleaning. Use a soft, dry cloth to wipe the exterior. Do not use liquid cleaners or aerosols.
- **Storage:** When not in use for extended periods, unplug the power strip and store it in a cool, dry place away from direct sunlight.
- **Cord Care:** Do not bend, crimp, or pull the power cord excessively. Avoid placing heavy objects on the cord.

Troubleshooting

Problem	Possible Cause	Solution
No power to devices.	Power switch is off, wall outlet is not active, or overload protection tripped.	Ensure the power switch is ON. Check the wall outlet with another device. If overload tripped, unplug some devices and press the ON/OFF switch to reset.
"PROTECTED" indicator is off.	Surge protection circuit has been compromised or expired.	The surge protection may no longer be active. While the power strip may still function as an extension cord, it will not protect against surges. Consider replacing the unit.

Problem	Possible Cause	Solution
"GROUNDED" indicator is off.	Improper grounding of the wall outlet.	Plug the power strip into a properly grounded outlet. If the issue persists, consult a qualified electrician.
USB ports not charging.	Device not compatible, cable faulty, or power strip is off.	Ensure the power strip is ON. Try a different USB cable or device.
