SETUP

The screwdriver set requires minimal setup. Simply open the case and select the appropriate bit for your task.

1. Open the storage case by gently lifting the lid.
2. Identify the required Torq-Set bit from the organized compartments.
3. Carefully remove the chosen bit from its slot.
4. Insert the base of the bit firmly into the tip of the screwdriver handle until it clicks securely into place.

OPERATING INSTRUCTIONS

This screwdriver set is ideal for precision tasks requiring Torq-Set fasteners. Always ensure you use the correct bit size to prevent damage to the fastener or the bit.

1. **Select the Correct Bit:** Match the Torq-Set bit to the size and type of the screw head you intend to work with. Using the wrong size can strip the screw or damage the bit.
2. **Secure the Bit:** Ensure the selected bit is fully inserted and securely seated in the screwdriver handle.
3. **Position the Screwdriver:** Place the tip of the bit squarely into the screw head, applying firm, even pressure.
4. **Turn the Screw:** Rotate the screwdriver handle clockwise to tighten screws or counter-clockwise to loosen them. Maintain consistent pressure to prevent cam-out.
5. **Remove the Bit:** After use, gently pull the bit out of the handle. Return it to its designated slot in the storage case to keep the set organized.

MAINTENANCE

Proper maintenance will extend the life of your screwdriver set.

- **Cleaning:** Wipe down the handle and bits with a clean, dry cloth after each use to remove dirt, grease, or debris. For stubborn grime, a slightly damp cloth can be used, followed by immediate drying.
- **Storage:** Always store the bits and handle in their original case. This protects them from damage, prevents loss, and keeps them organized. Store the case in a dry environment to prevent rust.
- **Inspection:** Periodically inspect the bits for signs of wear, such as rounded edges or cracks. Replace any damaged bits to ensure optimal performance and prevent damage to fasteners.

TROUBLESHOOTING

Here are some common issues and their solutions:

Problem	Possible Cause	Solution
Bit slips from screw head	Incorrect bit size; insufficient pressure; worn bit	Ensure correct bit size is used. Apply firm, consistent pressure. Replace worn bits.
Bit does not fit into handle	Debris in handle opening; bit inserted incorrectly	Check handle opening for obstructions and clear if necessary. Ensure bit is inserted straight and fully.
Screws are difficult to turn	Screw is seized; incorrect bit size; insufficient leverage	Apply penetrating oil to seized screws. Verify bit size. Ensure good grip on handle.
