4. Maintenance and Care

Regular maintenance of your vacuum filters is crucial for optimal performance and longevity of your vacuum cleaner. These filters are designed to be washable and reusable.

Cleaning Instructions:

1. Remove the foam and felt filters from your vacuum cleaner.

2. Rinse the filters under running water until the water runs clear.
3. Allow the filters to air dry completely for at least 24 hours before reinserting them into the vacuum. Do not use a dryer or direct heat.

Replacement Frequency:

For optimum performance of your vacuum cleaner, it is recommended to replace the vacuum filter every 3-6 months, depending on usage frequency and household environment (e.g., presence of pets, high dust levels).

5. Troubleshooting

If you experience issues after replacing your filters, consider the following:

- **Reduced Suction:** Ensure both the foam and felt filters are completely dry before reinstallation. Wet filters can restrict airflow. Also, check that the filters are seated correctly and there are no gaps allowing air to bypass the filter.
- **Filter Not Fitting Perfectly:** While these filters are designed for compatibility, slight variations can occur. Ensure the filter is aligned properly. If a minor loose fit is observed, ensure it does not compromise the seal, as a good seal is crucial for effective filtration.
- **Unusual Odors:** If odors persist after cleaning, it may indicate that the filters need to be replaced rather than just cleaned.

For persistent issues not covered here, please refer to the support section.
