# Nike Men's Vapor Edge Pro 360 Football Cleats Instruction Manual

Model: DA5456-002

## 1. PRODUCT OVERVIEW

The Nike Vapor Edge Pro 360 2 football cleats are engineered for performance on the field, providing support, comfort, and traction for quick movements. This manual outlines the features, setup, usage, and care instructions to ensure optimal performance and longevity of your cleats.

### Key Features:

- **Revamped Upper:** Features molded elements and texture around the heel for enhanced support during acceleration and lateral movements. A NikeSkin overlay contributes to durable comfort.
- **Traditional Lacing System:** Designed for in-game accessibility, allowing for quick and precise adjustments to fit and feel.
- **Elastic Ankle Cuff:** Provides a comfortable and breathable fit around the ankle.
- **Lightweight Design:** The upper is smooth and constructed for speed.
- **Internal Frame:** Offers the flexibility and support characteristic of a traditional cleat plate.
- **Wide Stud Placement:** Optimized for facilitating quick cuts and changes in direction.

## 2. SETUP AND INITIAL FIT

Proper setup and fit are crucial for comfort and performance. Follow these steps to prepare your cleats for use.

### 2.1 Lacing Your Cleats

1. **Loosen Laces:** Before putting on the cleats, fully loosen the laces from top to bottom to allow your foot to slide in easily.

2. **Insert Foot:** Gently slide your foot into the cleat, ensuring your heel is seated firmly against the back of the shoe.
3. **Tighten Laces:** Starting from the bottom eyelets, progressively tighten the laces, working your way up. Ensure an even tension across the foot. The traditional lacing system allows for precise control over tightness.
4. **Secure Knot:** Tie a secure knot (e.g., a double knot) to prevent laces from coming undone during activity.

*Tip:* Adjust the lacing tension to your preference. A snug fit is recommended for support, but avoid over-tightening, which can cause discomfort or restrict circulation.

## 2.2 Checking the Fit

- **Toe Room:** There should be a small amount of space (about a thumb's width) between your longest toe and the front of the cleat.
- **Heel Lock:** Your heel should feel secure with minimal slippage when walking or performing light movements. The revamped upper and elastic cuff contribute to a good heel lock.

- **Midfoot Comfort:** The cleat should feel snug around the midfoot without excessive pressure points.

### 4. MAINTENANCE AND CARE

---

Proper maintenance extends the life of your cleats and ensures they perform consistently.

#### 4.1 Cleaning Instructions

1. **Remove Loose Dirt:** After each use, knock off any excess mud or dirt from the cleats. A soft brush or old toothbrush can be used for stubborn areas, especially around the studs.
2. **Wipe Down:** Use a damp cloth with mild soap and water to wipe down the upper and sole. Avoid harsh chemicals or abrasive cleaners, as these can damage the materials.
3. **Rinse (if necessary):** If heavily soiled, a light rinse under cool water is acceptable, but avoid submerging the entire cleat.
4. **Air Dry:** Allow the cleats to air dry naturally at room temperature. Do not use direct heat sources like radiators or hair dryers, as this can cause materials to shrink or crack. Stuffing with newspaper can help

absorb moisture and maintain shape.

## 4.2 Storage

- Store cleats in a cool, dry place away from direct sunlight.
- Ensure cleats are completely dry before storing to prevent mold or mildew growth.

## 5. TROUBLESHOOTING

---

If you encounter issues with your cleats, consider the following common solutions.

### 5.1 Discomfort or Blisters

- **Check Fit:** Ensure the cleats are properly laced and fit snugly but not too tightly. Refer to Section 2.2 for fit guidelines.
- **Break-in Period:** New cleats may require a short break-in period. Wear them for shorter durations initially to allow them to conform to your foot.
- **Sock Choice:** Wear appropriate athletic socks that wick moisture and provide cushioning.

### 5.2 Laces Coming Undone

- Ensure laces are tied with a secure double knot.
- Check for wear or damage to the laces; replace if necessary.

### 5.3 Reduced Traction

- **Clean Studs:** Ensure no mud or debris is caked between the studs, which can reduce grip. Refer to Section 4.1.
- **Field Conditions:** Traction can vary significantly based on field type and weather conditions.
