Leaks from connections	Loose connections or improperly seated gaskets.	Turn off water supply. Check and tighten all connections. Ensure gaskets are correctly positioned. Do not overtighten.
Sprayer does not retract fully	Gravity ball improperly positioned or obstructed hose.	Adjust the position of the gravity ball on the pull-down hose. Ensure the hose path under the sink is clear of obstructions.
Water temperature not consistent	Improper hot/cold water supply connections or issues with water heater.	Verify hot and cold supply lines are connected correctly. Check your water heater settings.
