Initial Setup

Setting the Time

1. Locate the crown (the small knob on the side of the watch case).

2. Gently pull the crown outwards until you feel a click. The second hand will stop moving.

3. Rotate the crown clockwise or counter-clockwise to adjust the hour and minute hands to the correct time.

4. Once the time is set, push the crown back into its original position. The second hand will resume movement.

Activating the LED Microlight

The LED microlight is located on the top edge of the watch case. To activate it, press and hold the small button adjacent to the microlight. Release the button to turn off the light.

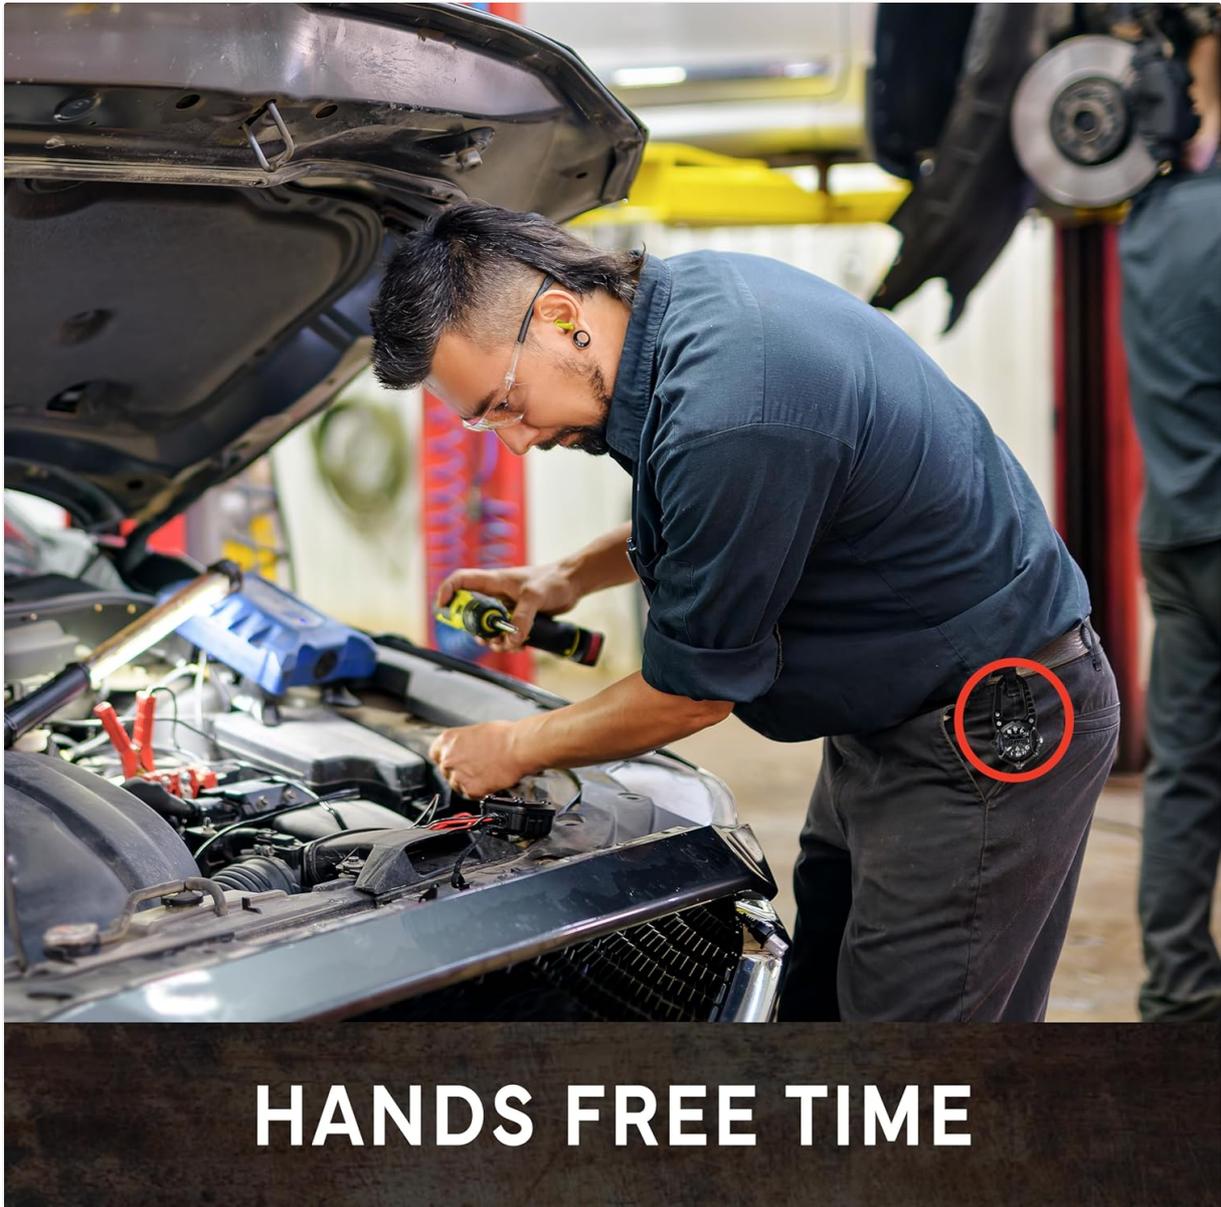

Image: A hand holding the watch, demonstrating the red LED microlight in use, illuminating an electrical panel.

Operation

Attaching the Watch

The integrated carabiner clip allows for versatile attachment. Open the spring-loaded gate of the carabiner and securely clip it onto a belt loop, backpack strap, key ring, or any other suitable loop. Ensure the gate is

fully closed after attachment to prevent accidental detachment.

Image: A person working on a car engine, with the watch clipped to their pants, illustrating hands-free time access.

Reading the Time

The watch features a clear analog dial. The longer hand indicates minutes, the shorter hand indicates hours, and the thin sweeping hand indicates seconds. The dial also includes 24-hour markings for military time reference.

Using the LED Microlight

The LED microlight is designed for quick illumination of small areas or for reading the time in dark environments. Press and hold the button to activate the light. The light will remain on as long as the button is pressed.

Care and Maintenance

Cleaning

To clean your watch, wipe it gently with a soft, damp cloth. Avoid using harsh chemicals, solvents, or

abrasive cleaners, as these can damage the finish or internal components. Ensure the crown is fully pushed in before cleaning to maintain water resistance.

Water Resistance

This watch is rated for 100 feet (3 ATM) water resistance. This means it is suitable for everyday use and can withstand splashes, rain, and brief immersion in water. It is **not** recommended for swimming, diving, or prolonged exposure to water. Always ensure the crown is fully pushed in to maintain water resistance.

Battery Replacement

The watch is powered by a long-lasting Japanese Quartz movement battery. When the watch stops or the LED light dims significantly, the battery may need replacement. Due to the specialized nature of watch batteries and to maintain water resistance, it is recommended to have the battery replaced by a qualified watch technician.

Troubleshooting

- **Watch Not Keeping Time:**

    - Check if the crown is fully pushed in.
    - The battery may need replacement. Refer to the "Battery Replacement" section.

- **LED Microlight Not Working:**

    - Ensure the button is being pressed firmly.
    - The battery for the microlight may be depleted. This often requires professional service.

- **Moisture Inside the Watch:**

    - Immediately take the watch to a professional watch repair service. Do not attempt to open the watch yourself, as this can void the warranty and cause further damage.

Product Specifications

Model Number	39000
Product Dimensions	1.53 x 1.53 x 0.6 inches
Item Weight	4 ounces
Water Resistance Depth	100 Feet (3 ATM)
Watch Movement Type	Quartz
Case Material Type	Metal
Crystal Material	Mineral Glass
Display Type	Analog
Power Source	Battery Powered
