## TROUBLESHOOTING

This section addresses common issues you might encounter with your Agilestic Electric Standing Desk. For more detailed solutions, please refer to the troubleshooting video.

*Video 3: Common installation problem solutions. This video covers solutions for error codes (E10, E20, E02), abnormal noise, instability, integral inability to rise/fall, and single side lift issues.*

### Common Issues and Solutions:

**1. Error Code E10 (Manual Controller Issue):**

If E10 is displayed, hold down the down button for three seconds until "RES" is displayed. The table will run down to its lowest height and bounce slightly. This should resolve the issue. If not, wait 8 minutes for the manual to naturally cool down, then repeat the process.

**2. Error Code E20 (Overload):**

E20 indicates the desk is overloaded (exceeding 154 lbs). Reduce the weight on the desk to below the rated load range. Then, hold down the down button for three seconds until "RES" is displayed. The table will run down to its lowest height and bounce slightly, resolving the issue.

**3. Error Code E02 (Sensitivity Adjustment):**

If E02 is frequently displayed, the sensitivity of the anti-collision system might need adjustment. Press buttons 1 and 2 simultaneously for two seconds. The display will blink and show the current key force gear (L for Light, N for Normal, H for Heavy, OFF). Adjust the sensitivity as needed. To turn off the anti-collision, press 1 and 2 simultaneously for two seconds when the current position is "OFF" gear.

**4. Abnormal Noise:**

Check that the two mounting screws of the motor are tightened. If not, tighten them with the provided tool. Also, ensure the screws on the beam and column are tight.

**5. Instability/Wobbling:**

Check whether the screws on the footing and column are tight. If not, tighten them. Ensure all screws of the whole frame and table are tightened.

**6. Integral Inability to Rise and Fall:**

Check if the hex bar is inverted. The long side with the card slot cannot be installed on the side without the motor. If it's upside down, you need to take the frame apart and turn the hex bar the other way around. Ensure the long side card slot is tightened with the motor.

**7. Single Side Lift (Unilateral Rise and Fall):**

Check that the wires behind the hand controller are properly connected. Reinsert and install if improperly connected. Also, check whether the power supply is properly connected and reinsert it. If the issue persists, hold down the down button for three seconds until "RES" is displayed. The table will run down to its lowest height and bounce slightly, resolving the issue.
