2. IDENTIFYING YOUR LOCK CODE

To ensure you have the correct replacement key, it is crucial to accurately identify the lock code associated with your Kennedy K105 toolbox. The code is typically found in one of the following locations:

1. **On the Original Key:** If available, the code is often stamped directly onto the key blade or head.
2. **On the Lock Face:** The code may be engraved or printed on the visible part of the lock cylinder.
3. **Inside/Behind the Lock:** For some locks, the code is located on a label or stamped directly onto the lock mechanism, which may require opening the toolbox or removing a panel to access.

4. **On the Cabinet/Door Label:** Occasionally, the lock code is listed on a label affixed to the toolbox itself, near the lock or on an interior surface.

Important Notes

- Order by Manufacturer → Lock codes are manufacturer-specific.
- Key Cuts Differ → Even if codes look similar, they vary by brand.

Important Notes:

- **Manufacturer Specificity:** Lock codes are specific to the manufacturer. Ensure you are ordering a key compatible with Kennedy locks.
- **Key Cut Variations:** Even if codes appear similar, key cuts can vary significantly between different brands and models. Always verify the exact code for your Kennedy K105 lock.

3. USING YOUR REPLACEMENT KEY

Using your EasyKeys replacement key is straightforward. Follow these steps for proper operation:

1. **Insert the Key:** Gently insert the key into the lock cylinder, ensuring the key is oriented correctly. Do not force the key.
2. **Turn the Key:** Once fully inserted, turn the key clockwise or counter-clockwise (depending on the lock mechanism) to engage or disengage the lock.
3. **Remove the Key:** After locking or unlocking, return the key to its original insertion position before gently pulling it out.

4. MAINTENANCE

Proper maintenance can extend the life of your lock and ensure smooth key operation.

- **Lubrication:** If the key feels stiff or difficult to turn, apply a small amount of graphite lubricant into the keyway. Avoid using oil-based lubricants, as they can attract dust and debris, leading to further issues.
- **Cleaning:** Keep the key clean and free from dirt or debris that could interfere with the lock mechanism.

5. TROUBLESHOOTING

If you encounter issues with your replacement key, consider the following troubleshooting steps:

- **Key Does Not Insert Fully:** Check for any obstructions in the keyway. Ensure the key is the correct one for your lock and is oriented properly.
- **Key Is Stiff or Hard to Turn:** Apply graphite lubricant to the keyway as described in the Maintenance section. Do not force the key, as this can damage the key or the lock.
- **Lock Does Not Engage/Disengage:** Verify that the key is fully inserted and turned completely. If the issue persists, the lock mechanism itself may require inspection or replacement.
