5. MAINTENANCE

To ensure the longevity and optimal performance of your Backbone One controller, follow these simple maintenance guidelines:

- **Cleaning:** Use a soft, dry, lint-free cloth to wipe down the controller. For stubborn smudges, slightly dampen the cloth with water. Avoid harsh chemicals or abrasive materials.
- **Storage:** When not in use, store the controller in a cool, dry place away from direct sunlight and extreme temperatures. The compact, collapsible design makes it easy to store.
- **Handling:** Avoid dropping the controller or subjecting it to excessive force. Do not attempt to disassemble the device, as this will void the warranty.
- **Connector Care:** Keep the Lightning connector free of dust and debris. If necessary, use a soft brush to gently clean the port.

6. TROUBLESHOOTING

If you encounter any issues with your Backbone One controller, refer to the common solutions below.

6.1 Controller Not Responding

- **Check Connection:** Ensure your iPhone is securely seated in the Lightning connector. Remove and re-insert the iPhone to confirm a proper connection.
- **Restart App/iPhone:** Close and reopen the game or the Backbone app. If the issue persists, restart your iPhone.
- **Clean Connector:** Inspect the Lightning port on your iPhone and the controller's connector for any dust or debris that might be obstructing the connection.

6.2 Latency Issues / Input Lag

- The Backbone One is designed for lowest latency via direct Lightning connection. If experiencing lag, ensure no other background apps are consuming significant resources on your iPhone.
- For cloud gaming or remote play, ensure you have a stable and strong internet connection (Wi-Fi or cellular data). Network congestion can cause latency.

6.3 Phone Case Interference

- The Backbone One includes magnetic adapters to accommodate most phone cases. If your case is too thick or oddly shaped, you may need to remove it for optimal fit and connection.

6.4 Charging Issues

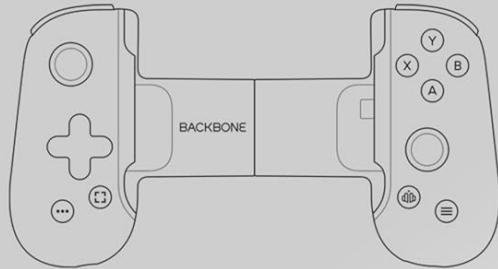

- Ensure the charging cable is properly connected to the pass-through charging port on the Backbone One and to a power source.
- Verify that the charging cable and power adapter are functional with your iPhone directly.
