5. MAINTENANCE AND CLEANING

Regular cleaning of your grease filter is crucial for maintaining the performance and longevity of your range hood. Clean the filters approximately every 3-4 weeks, or more frequently depending on cooking habits.

Cleaning Steps:

1. **Remove the Filter:** Carefully detach the filter from the range hood.
2. **Prepare Cleaning Solution:** Fill a sink or bucket with hot water. The hotter the water, the more effective the cleaning. Add baking soda and dish detergent to the water.
3. **Soak the Filter:** Submerge the filter in the hot water solution. Allow it to soak for a period to loosen grease and grime.
4. **Scrub Gently:** After soaking, gently scrub the filter with a non-abrasive brush to remove any remaining residue.
5. **Rinse and Dry:** Rinse the filter thoroughly with clean water and allow it to air dry completely before re-installing it into the

range hood.

6. TROUBLESHOOTING

If your range hood's performance seems to decrease, consider the following:

- **Reduced Airflow:** Check if the grease filter is clogged. A dirty filter can significantly impede airflow. Clean the filter as per the maintenance instructions.
- **Improper Fit:** Ensure the filter is correctly installed and fully seated in its housing. An improperly fitted filter can allow grease to bypass the filtration system.

If issues persist after cleaning and re-installing the filter, please contact FIREGAS customer support for further assistance.
