TROUBLESHOOTING

If you encounter any issues with your loft bed, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Bed wobbles or feels unstable.	Loose bolts or connectors.	Check all bolts and re-tighten them securely using the provided Allen wrench. Ensure the bed is on a level surface.
Squeaking noises.	Loose connections or friction between metal parts.	Re-tighten all bolts. If squeaking persists, apply a small amount of silicone lubricant to the connection points.
Missing parts during assembly.	Parts may be in the second package or an error occurred during packing.	Verify if both packages have arrived. If parts are still missing, contact Harper & Bright Designs customer support with your purchase details.
Difficulty aligning holes during assembly.	Parts are not oriented correctly or bolts are overtightened prematurely.	Loosen any previously tightened bolts. Ensure parts are oriented as per the instructions. Try wiggling components gently to align holes.
