## 4. SETUP AND CONNECTION

### 4.1. Charging the Controller

Before first use, fully charge the controller. Connect the supplied USB-C cable to the controller's charging port and the other end to a USB power source (e.g., Nintendo Switch dock, computer, USB wall adapter). The LED indicators will show charging status and turn off when fully charged.

**Image 4.1: Battery Life Indication.** The controller offers approximately 10 hours of playtime on a full charge (600 mAh battery).

### 4.2. Connecting to Nintendo Switch / Switch OLED

1. On your Nintendo Switch console, go to the HOME Menu.
2. Select '**Controllers**' > '**Change Grip/Order**'.
3. Press and hold the **HOME button** on the SUBSONIC controller for 3-5 seconds until the LED indicators start flashing rapidly.

4. Once the controller is successfully paired, the LED indicators will stop flashing and remain solid. The controller will appear on the console screen.
5. Press the **A button** on the controller to confirm the connection.

The controller will automatically reconnect to the last paired console when powered on.

### 4.3. Wake Up Function

The controller supports a wake-up function for the Nintendo Switch console. When the console is in sleep mode, press the **HOME button** on the controller to wake it up and automatically reconnect.

Image 4.2: Wake Up Function. Pressing the HOME button can wake the console from sleep mode.

## 5. OPERATING FEATURES

### 5.1. 6-Axis Gyro Motion Sensors

The controller is equipped with a 6-axis gyroscope and accelerometer, allowing for precise motion control in compatible games. This feature enables intuitive gameplay, such as steering in racing games by tilting the controller.

# ADJUSTABLE VIBRATION:

Image 5.1: 360° Motion Sensors. The controller detects movement and orientation in all directions.

## 5.2. Adjustable Vibration

The controller features dual motors for haptic feedback with three adjustable vibration levels (Weak, Medium, Strong). To adjust the vibration intensity:

1. Press and hold the **TURBO button**.
2. While holding TURBO, press the **D-Pad Up** to increase vibration intensity or **D-Pad Down** to decrease it.

Image 5.2: Adjustable Vibration. Customize the intensity of haptic feedback.

### 5.3. Programmable RGB LED

The controller includes programmable RGB LED lighting around the analog sticks. You can choose between two modes: Fixed Colors or Breathing Colors, and adjust the color and brightness.

1. **Change LED Mode:** Press and hold the **LED button** (located near the HOME button) for 3 seconds to switch between Fixed Color mode and Breathing Color mode.
2. **Adjust Color:** In Fixed Color mode, short press the **LED button** to cycle through available colors.
3. **Adjust Brightness:** Press and hold the **LED button**, then use the **Right Analog Stick Up/Down** to adjust brightness.

# PROGRAMMABLE ESPORTS M1 & M2 KEYS:

## 5.4. Programmable M1 & M2 Keys

The M1 and M2 buttons on the back of the controller can be programmed to replicate other button inputs, providing quick access to complex actions.

1. **Enter Programming Mode:** Press and hold the **M1 or M2 button** you wish to program, then press the **Screenshot button** simultaneously. The LED indicator will flash slowly.
2. **Input Desired Button:** Press the button(s) you want M1/M2 to emulate (e.g., A, B, X, Y, L, R, ZL, ZR, L3, R3, D-Pad directions).
3. **Exit Programming Mode:** Press the **M1 or M2 button** again. The LED indicator will stop flashing, indicating successful programming.

# TURBO & AUTO FUNCTIONS:

Image 5.4: Programmable M1 & M2 Keys. Assign common actions to the back buttons for improved ergonomics and speed.

## 5.5. Turbo & Auto Functions

The Turbo function allows a button to be pressed repeatedly as long as it is held down. The Auto function makes a button repeatedly press itself without needing to be held.

1. **Activate Turbo:** Press and hold the **TURBO button**, then press the desired action button (e.g., A, B, X, Y, L, R, ZL, ZR). The LED indicator will flash.
2. **Activate Auto:** With Turbo active for a button, press and hold **TURBO** again, then press the same action button. The LED indicator will flash faster.
3. **Deactivate Turbo/Auto:** Repeat the steps above until the LED indicator stops flashing for that button.

## 6. TROUBLESHOOTING

- **Controller not connecting:** Ensure the controller is charged. Go to 'Change Grip/Order' on the Switch and try pairing again. If issues persist, press the small RESET button on the back of the controller with a thin object (like a paperclip) and attempt to pair again.
- **Input lag or disconnection:** Ensure there are no strong wireless interferences nearby. Move closer to the console. Check for console system updates.
- **Vibration not working:** Check if vibration is enabled in the game settings and on the console. Adjust vibration intensity as described in Section 5.2.
- **Buttons not responding:** Try resetting the controller using the RESET button. If specific buttons are unresponsive, contact customer support.
- **LEDs not working:** Ensure the controller is powered on and charged. Try cycling through LED modes and adjusting brightness as described in Section 5.3.
