## 5. SETUP AND INSTALLATION

---

The DWVO 36 Inch Bathroom Vanity is designed for straightforward assembly. The unit is shipped in two main parts: the pre-assembled cabinet and the countertop with integrated sink. All essential hardware for assembly is included.

### 5.1 Unpacking and Inspection

1. Carefully unpack all components and verify against the parts list (not provided in source, but implied).
2. Inspect all parts for any damage. Do not proceed with assembly if any components are damaged. Contact customer support immediately.
3. Ensure you have all necessary tools (e.g., screwdriver, wrench, level) before starting.

### 5.2 Attaching the Metal Legs

1. Gently place the cabinet body upside down on a soft, protected surface to prevent scratches.
2. Attach the four stainless steel metal legs to the designated mounting points on the bottom of the cabinet using the provided hardware.
3. Ensure all leg connections are tightened securely. The legs feature adjustable feet for leveling the vanity on uneven floors.

### 5.3 Placing the Countertop

1. With the cabinet upright and leveled, carefully place the sintered stone countertop with the integrated sink onto the top of the cabinet.
2. Align the countertop precisely with the cabinet edges. The countertop is designed to rest securely on the cabinet. For added stability, it is recommended to apply a bead of silicone sealant (not included) along the contact points between the countertop and the cabinet, and between the countertop and the wall, after final positioning.

### 5.4 Plumbing Connections

- Connect the drain assembly to the integrated ceramic sink.
- Connect the water supply lines to your faucet (faucet not included) and then to the main water supply.
- The vanity's design may require careful routing of plumbing. Access to plumbing connections is typically achieved by removing the drawers. To remove drawers, locate and disengage the release mechanisms on the drawer slides (consult specific drawer slide instructions if available).
- Ensure all plumbing connections are watertight to prevent leaks. It is advisable to have a qualified plumber perform these connections if you are not experienced.
