## INTRODUCTION

This manual provides detailed instructions for the assembly, operation, and maintenance of your VIWAT 10x10 FT Outdoor Storage Shed. Please read all instructions carefully before beginning assembly and retain this manual for future reference. Proper assembly and care will ensure the longevity and optimal performance of your shed.

## SETUP AND ASSEMBLY

The VIWAT 10x10 FT Outdoor Storage Shed features an upgraded full-frame structure designed for improved stability and ease of installation. Each part is clearly labeled, and a detailed step-by-step manual is included with your product to guide you through the assembly process. For visual assistance, please refer to the official installation video below.

### Key Assembly Steps:

- 1. Base Section Installation:** Begin by assembling the base frame. Ensure all components are securely fastened as per the included manual. This forms the foundation of your shed.
- 2. Framework Section Installation:** Erect the vertical and horizontal framework components. Pay close attention to the orientation of parts, especially those with pre-drilled holes, to ensure proper alignment for subsequent steps.
- 3. Wall Panel Section Installation:** Attach the wall panels to the framework. The panels are designed for weather resistance and UV protection. Secure them firmly to maintain structural integrity.
- 4. Roof Section Installation:** Assemble and install the roof panels. The sloped roof design is crucial for efficient water runoff. Ensure all roof panels are correctly aligned and fastened to prevent leaks.
- 5. Door Panel Section Installation:** Install the lockable doors. Verify that the doors operate smoothly and the locking mechanism functions correctly for security.

For detailed visual guidance on the assembly process, please watch the official VIWAT 10x10 FT Outdoor Storage Shed installation video:

## OPERATING YOUR SHED

Your VIWAT storage shed is designed for practical and secure use. Understanding its features will help you maximize its utility.

- **Lockable Doors:** The shed is equipped with lockable doors to ensure the security of your stored items. Always ensure the doors are properly closed and locked when not in use to protect contents from weather and unauthorized access.
- **Ventilation:** Four strategically placed vents promote better air circulation within the shed, helping to prevent condensation and maintain a suitable environment for your tools and equipment. Ensure these vents remain unobstructed.

## MAINTENANCE

---

Regular maintenance will extend the lifespan of your VIWAT storage shed and ensure its continued performance.

- **Cleaning:** The shed's superior-grade metal with waterproof and UV-resistant capabilities makes it easy to clean. Simply wipe down the exterior with a damp cloth and mild detergent as needed. Avoid abrasive cleaners that could damage the finish.
- **Structural Check:** Periodically inspect all bolts, screws, and connections to ensure they remain tight. Re-tighten any loose fasteners to maintain the shed's stability and durability.
- **Water Runoff:** The sloped roof is designed for efficient water runoff. Regularly clear any debris, such as leaves or branches, from the roof and surrounding area to prevent water accumulation and ensure proper drainage.
- **Door Functionality:** Keep the door tracks clean and free of obstructions to ensure smooth operation of the sliding doors. Lubricate moving parts if necessary.

## TROUBLESHOOTING

If you encounter issues with your shed, consider the following common problems and solutions:

- **Panels Not Lining Up / Bent Panels:**

During assembly, some panels may appear slightly bent or misaligned. This can often be resolved by carefully adjusting the panels and ensuring all screws are loosely fitted before fully tightening any. A professional installer noted that some steps need extra attention to detail. Ensure you follow the step-by-step manual precisely. If panels are significantly bent upon arrival, contact customer support for assistance.

- **Shed Leaks:**

Leaks can occur if panels are not properly sealed or if screws are not tightened sufficiently. Double-check all connections, especially on the roof and where wall panels meet the base. Ensure the sloped roof is free of debris. If leaks persist after verifying assembly, additional sealing may be required, or contact customer support.

- **Doors Not Sliding Smoothly:**

Check the door tracks for any debris or obstructions. Clean the tracks thoroughly. If the issue persists, apply a silicone-based lubricant to the tracks to improve sliding motion.

For any issues not covered here, or if problems persist, please contact VIWAT customer support.
