3. To power off the device, ensure the switch is in the 'Save' or 'Off' position.

4.2 Voice Activated Recording (VOR)

When Voice Activated Recording (VOR) is enabled, the recorder will automatically start recording when ambient sound reaches a specified decibel level and pause when there is no sound. 7. MAINTENANCE

To ensure the longevity and optimal performance of your Jectse Q85 Digital Voice Recorder, follow these maintenance guidelines:

- Keep the device dry and away from extreme temperatures (both hot and cold).
- Clean the exterior with a soft, dry cloth. Avoid using harsh chemicals, solvents, or abrasive materials.
- Store the device in a cool, dry place when not in use, preferably in its original packaging or a protective case.
- Avoid dropping or subjecting the device to strong impacts, as this can damage internal components.
- Do not attempt to disassemble or repair the device yourself, as this will void the warranty.

8. TROUBLESHOOTING

8.1 Device Not Turning On

- Ensure the battery is sufficiently charged. Connect the device to a power source and allow it to charge for at least 30 minutes before attempting to power on again.
- Verify that the power/record switch is in the correct position to initiate recording or power on.

8.2 Poor Audio Quality

- Check if the microphone is obstructed by clothing or other objects.
- Ensure you are recording in a quiet environment. While the device has noise reduction, extreme noise levels can still affect quality.
- Ensure the recording bitrate is set appropriately for your needs. Higher bitrates generally offer better quality but consume more storage.

8.3 Cannot Save Recordings

- Verify that there is sufficient storage space available on the device. Delete unnecessary files if storage is full.
- Ensure the recording switch is moved to the 'Save' position correctly and held briefly if necessary.
- If the battery is critically low, the device may automatically save and power off. Ensure adequate charge.

8.4 Device Not Responding

- Try performing a soft reset by holding down the power button (or relevant control) for an extended period (e.g., 10-15 seconds).
- If the issue persists, connect the device to a computer to see if it is recognized, and attempt to format the storage (this will erase all data).
