4. ASSEMBLY INSTRUCTIONS

The Yicensen bed frame is designed for easy assembly. Follow these steps to set up your bed frame.

Step-by-Step Guide:

1. **Unpack Components:** Carefully remove all parts from the packaging. Lay them out on a clean, soft surface to prevent scratches.
2. **Assemble Frame Sides:** Connect the side rails and end rails using the provided bolts and nuts. Ensure the rounded corner legs are correctly oriented.

4 Rounded Corner Legs Cannot Install Headboard

Image 4.1: The rounded corner legs are designed for safety and aesthetics.

3. **Install Center Support:** Attach the center support beams to the frame. Ensure they are securely fastened to provide maximum stability.
4. **Attach Slats:** Place the metal slats across the frame. The slats are designed to fit snugly and provide robust support for your mattress without the need for a box spring.

Image 4.2: Visual guide for connecting the frame components.

5. **Tighten All Connections:** Using the provided tools, securely tighten all bolts and nuts. The anti-loosening nuts with rubber rings require the hex wrench for proper tightening. Do not overtighten.

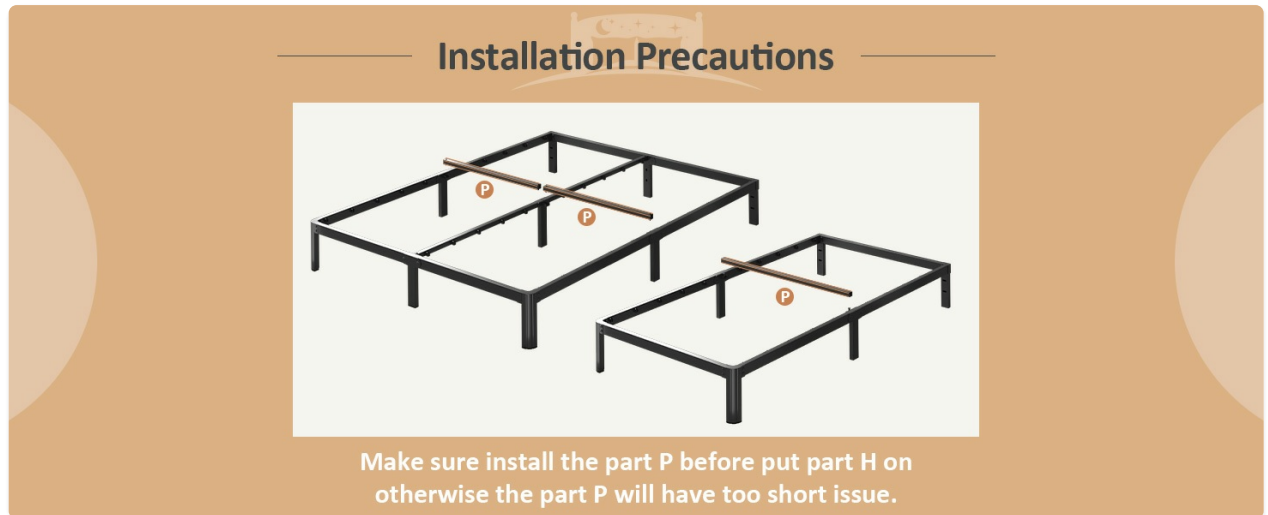

Image 4.3: Anti-loosening nuts ensure a secure and stable assembly.

5. OPERATING INSTRUCTIONS

Once assembled, your Yicensen bed frame is ready for use. Simply place your twin-sized mattress directly onto the support slats. A box spring is not required, but can be used if desired, though it will increase the overall bed height.

Image 5.1: The 24-inch height provides ample under-bed storage space.

6. MAINTENANCE

- **Cleaning:** Wipe the metal frame with a damp cloth and mild detergent. Avoid abrasive cleaners that may damage the finish.
- **Regular Checks:** Periodically inspect all bolts and connections to ensure they remain tight. Re-tighten as necessary to maintain stability and prevent noise.
- **Weight Distribution:** Distribute weight evenly across the bed frame to prolong its lifespan.

7. TROUBLESHOOTING

Common Issues:

- **Squeaking or Noise:** If the bed frame makes noise, check all connections and tighten any loose bolts. Ensure the slats are properly seated. Applying a small amount of lubricant to connection points may also help.

- **Mattress Sliding:** If your mattress tends to slide on the frame, consider placing a non-slip mat or rubber grippers between the mattress and the slats.
