Setup and Installation

Proper installation is crucial for optimal performance. It is recommended that installation be performed by a licensed professional.

General Installation Steps

1. **Prepare the Floor Flange:** Ensure the floor flange is securely installed and ready for the toilet.
2. **Apply Wax Ring:** Evenly apply the wax ring gasket around the rear of the toilet's trapway.
3. **Position the Toilet:** Carefully align the toilet over the floor flange and mounting bolts.
4. **Secure the Toilet:** Install washers and nuts onto the bolts and tighten them to secure the toilet to the floor.

5. **Connect Water Supply:** Connect the water supply line to the fill valve at the back of the toilet. Ensure all connections are tight to prevent leaks.
6. **Install Side Covers:** Assemble and install the decorative side covers to conceal the mounting hardware.

TROUBLESHOOTING

If you encounter any issues with your Eridanus toilet, please review the following common troubleshooting tips:

- **Weak Flush:** Check the water level in the tank. Ensure the fill valve is adjusted correctly to allow sufficient water volume. Verify that the flush button mechanism is not obstructed or misaligned.
- **Continuous Running Water:** Inspect the flush valve for any obstructions or wear. Ensure the fill valve is properly seated and not allowing water to continuously enter the tank.
- **Leaking:** Check all water supply connections for tightness. Inspect the wax ring for proper seal. If leaks persist, professional assistance may be required.
- **Loose Seat:** Tighten the mounting screws for the toilet seat hinges. Refer to the 'Toilet Seat Adjustment' video in the Maintenance section for guidance.
