INSTALLATION INSTRUCTIONS

Safety Precautions

Before beginning installation, ensure the vehicle or equipment is turned off and the battery is disconnected. This prevents accidental starting, electrical shock, or damage to the electrical system.

Installation Steps

1. **Step 1: Remove Existing Components**

Carefully remove the existing ignition switch nut and any old protective covers or keys from the ignition switch shaft.

2. **Step 2: Install Rubber Grommet**

Place the new rubber grommet over the ignition switch shaft. Ensure it sits flush against the mounting surface of the equipment.

3. **Step 3: Secure Ignition Switch**

Thread the new mounting nut onto the ignition switch and tighten it securely. Avoid overtightening, which can damage the switch or mounting surface.

4. **Step 4: Apply Protective Cover**

Place the protective cover over the ignition switch, ensuring it forms a tight seal around the base of the switch.

5. **Step 5: Use Umbrella Key**

Insert the upgraded umbrella key into the ignition. The design of the key provides an additional layer of protection against debris and moisture when inserted.

The protective cover and grommet are designed to remain in place, continuously shielding the ignition from environmental factors.

MAINTENANCE

To ensure optimal performance and longevity of your ignition protection kit, follow these maintenance

guidelines:

- **Regular Inspection:** Periodically inspect the rubber grommet and protective cover for any signs of wear, cracking, or damage. Replace components immediately if damage is observed to maintain effective protection.
- **Keep Clean:** Keep the key and the area around the ignition switch clean from excessive dirt, dust, or debris.
- **Cleaning:** Avoid using harsh chemicals or solvents for cleaning the rubber components; a damp cloth with mild soap is sufficient.

TROUBLESHOOTING

If you encounter issues with your HD Switch Ultimate Ignition Protection Kit, refer to the following troubleshooting guide:

- **Key Does Not Turn Smoothly**
Possible Cause: Debris in the ignition cylinder or a worn key.
Solution: Clean the ignition cylinder with a suitable electrical contact cleaner. If the key appears worn or damaged, replace it with a new HD Switch umbrella key.
- **Protective Cover Does Not Fit Snugly**
Possible Cause: Incorrect installation or an incompatible ignition switch.
Solution: Re-check the installation steps to ensure the cover is seated correctly. Confirm that your ignition switch is an INDAK type, as this kit is designed specifically for these switches. If the cover is damaged, replace it.
- **Water or Dirt Entering Ignition**
Possible Cause: Damaged grommet or cover, or improper installation.
Solution: Inspect the rubber grommet and protective cover for any tears, cracks, or improper seating. Ensure all components are installed correctly and form a tight, continuous seal around the ignition switch.
