## 6. MAINTENANCE

Regular maintenance will help preserve the appearance and structural integrity of your Merax Loft Bed.

- **Cleaning:** Wipe surfaces with a soft, damp cloth. Avoid using harsh chemicals, abrasive cleaners, or polishes that may damage the finish.
- **Hardware Check:** Periodically (e.g., every 3-6 months) inspect all bolts, screws, and connections. Re-tighten any loose hardware to ensure stability and safety. Do not overtighten.
- **Moving the Bed:** If you need to move the bed, lift it rather than dragging it to prevent damage to the frame and your flooring. For significant moves, partial disassembly may be required.
- **Environmental Conditions:** Avoid placing the bed in direct sunlight or near heat sources, which can cause wood to dry out, crack, or fade. Maintain a stable room temperature and humidity.

## 7. TROUBLESHOOTING

---

Here are some common issues and their potential solutions:

Problem	Possible Cause	Solution
Bed feels wobbly or unstable	Loose hardware connections.	Check and re-tighten all bolts and screws. Ensure all components are correctly aligned.

Problem	Possible Cause	Solution
Drawers stick or don't slide smoothly	Overloaded drawer, misaligned slides, or debris in tracks.	Reduce drawer contents. Check that drawer slides are properly installed and aligned. Clean tracks of any dust or debris.
