

McKesson MCK8100MATB

McKesson Refrigerator and Freezer Thermometer with Alarm, Dual-Probe

Model: MCK8100MATB

1. INTRODUCTION

This manual provides detailed instructions for the proper setup, operation, and maintenance of your McKesson Refrigerator and Freezer Thermometer with Alarm, Dual-Probe. This device is designed for accurate temperature monitoring in cold storage environments, featuring dual probes, a digital display, and customizable high/low temperature alarms. Please read this manual thoroughly before use to ensure optimal performance and longevity of the product.

2. PRODUCT OVERVIEW

The McKesson Dual-Probe Thermometer is a reliable instrument for monitoring temperatures in refrigerators and freezers. It offers precise readings and alerts to help maintain optimal conditions for stored items.

Key Features:

- **Dual-Probe Measurement:** Allows simultaneous monitoring of two distinct locations.
- **Waterproof Digital Display:** Clear and easy-to-read display with a 10-second refresh rate.
- **High Accuracy:** Provides readings with an accuracy of $\pm 0.5^{\circ}\text{C}$ and a 0.1° display resolution.
- **Max/Min Temperature Alarm:** Audible and visual alarms activate when temperatures exceed or fall below user-defined thresholds.
- **NIST Traceable:** Each thermometer is certified, sterilized, traceable, and tested against standards calibrated at the National Institute of Standards and Technology.
- **Wide Temperature Range:** Measures temperatures from -58°F to $+158^{\circ}\text{F}$ (-50°C to $+70^{\circ}\text{C}$).

What's in the Box:

- McKesson Refrigerator/Freezer Thermometer Unit
- Two Temperature Probes (S1 and S2)
- Batteries (typically AAA, included)

This image displays the McKesson Dual-Probe Refrigerator and Freezer Thermometer alongside its retail packaging. The thermometer features a digital display and two external probes.

An overhead view showing the main thermometer unit, two wired temperature probes (S1 and S2), and two AAA batteries, illustrating all included components.

3. SETUP

3.1 Battery Installation

1. Locate the battery compartment on the back of the thermometer unit.
2. Open the compartment cover.
3. Insert the included AAA batteries, ensuring correct polarity (+/-).
4. Close the battery compartment cover securely.

3.2 Probe Connection and Placement

1. Connect the two temperature probes (S1 and S2) into their respective ports on the thermometer unit.
2. Place Probe S1 in the desired location for monitoring (e.g., refrigerator compartment).
3. Place Probe S2 in the second desired location (e.g., freezer compartment). Ensure probes are not submerged

in liquid unless specifically designed for it and are positioned to accurately reflect the ambient temperature of the monitored area.

4. The main unit can be placed outside the refrigerator/freezer for easy viewing, using its built-in stand or magnetic back (if applicable).

A close-up shot of the two distinct temperature probes, labeled S1 and S2, designed for monitoring temperatures in different environments.

4. OPERATING INSTRUCTIONS

4.1 Power On/Off

The thermometer typically powers on automatically once batteries are installed. There may be a dedicated power button or it may remain on continuously.

4.2 Reading the Display

The digital display shows the current temperature readings for both probes (S1 and S2). It may also show the time

and date, and indicators for Max/Min temperatures or alarm status.

A detailed view of the thermometer's digital screen, indicating a current temperature reading of 21.3°C and a time display of 15:36. The S1/S2 indicators and control buttons are also visible.

4.3 Switching Temperature Units (°C/°F)

Press the 'Mode' button (or a dedicated °C/°F button if present) to toggle between Celsius and Fahrenheit temperature units.

4.4 Setting Max/Min Alarms

1. Press the 'Set' button to enter alarm setting mode.
2. Use the 'Up' or 'Down' arrow buttons (or 'Mode' button to cycle) to adjust the desired high temperature limit for Probe S1.
3. Press 'Set' again to confirm and move to the low temperature limit for Probe S1. Adjust as needed.
4. Repeat the process for Probe S2's high and low temperature limits.
5. Press 'Set' one last time to exit alarm setting mode.

6. When the temperature goes above or below these set limits, an audible and visual alarm will trigger.

4.5 Viewing and Clearing Max/Min Recorded Temperatures

1. Press the 'Mode' button repeatedly to cycle through current temperature, maximum recorded temperature, and minimum recorded temperature for each probe.
2. To clear the recorded Max/Min temperatures, press and hold the 'Clear' button while viewing the Max or Min readings. This will reset them to the current temperature.

4.6 Setting Time and Date

Press and hold the 'Time/Date Set' button to enter time and date setting mode. Use the 'Up' or 'Down' arrow buttons to adjust values and 'Set' to confirm and move to the next setting (e.g., hour, minute, day, month, year).

The thermometer unit is shown on a wooden countertop, displaying a temperature of 24.0°C and a time of 12:10:05. Its two probes are positioned next to it, ready for temperature monitoring.

5. MAINTENANCE

5.1 Cleaning

Wipe the thermometer unit and probes with a soft, damp cloth. Do not use abrasive cleaners or immerse the main unit in water. The probes are waterproof and can be cleaned with mild soap and water if necessary, then rinsed thoroughly.

5.2 Battery Replacement

When the display becomes dim or the unit stops functioning, replace the batteries. Follow the battery installation steps in Section 3.1. Dispose of old batteries according to local regulations.

5.3 Storage

If storing the thermometer for an extended period, remove the batteries to prevent leakage. Store the unit and probes in a cool, dry place away from direct sunlight and extreme temperatures.

6. TROUBLESHOOTING

Problem	Possible Cause	Solution
No display or dim display	Dead or incorrectly installed batteries	Replace batteries, ensuring correct polarity.
Incorrect temperature readings	Probe not properly connected or damaged; probe placed incorrectly	Ensure probes are securely plugged in. Reposition probes to accurately measure ambient air. If problem persists, probe may be faulty.
Alarm not sounding/visualizing	Alarm limits not set correctly; alarm function disabled	Verify alarm settings (Section 4.4). Ensure alarm is enabled (if applicable).
Display shows 'LLL' or 'HHH'	Temperature is outside the measurable range	Move the probe to an environment within the specified temperature range (-58°F to +158°F).

7. SPECIFICATIONS

Feature	Specification
Model Number	MCK8100MATB
Temperature Range	-58°F to +158°F (-50°C to +70°C)
Accuracy	±0.5°C
Display Resolution	0.1°
Refresh Rate	10 seconds
Probe Type	Dual, Waterproof
Product Dimensions	8.25 x 5 x 2.5 inches
Item Weight	7.2 ounces

8. WARRANTY AND SUPPORT

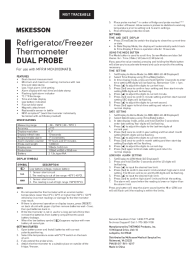

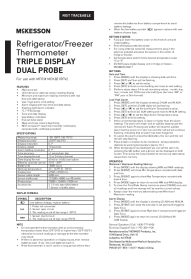

For general questions or technical support regarding your McKesson Refrigerator and Freezer Thermometer, please refer to the contact information provided on the product packaging or the official McKesson website.

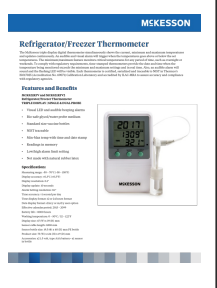

- General Questions: Call 1-800-777-4908
- Technical Support: Call 1-777-300-9100

Please retain your purchase receipt for warranty purposes. Specific warranty details may vary and are typically outlined in the product packaging or on the manufacturer's website.

McKesson

Refrigerator/Freezer Thermometer

The McKesson triple display digital thermometer simultaneously shows the current, recent and maximum temperatures and provides the flexibility and visual alarm when the temperatures go above or below the setpoint. The instrument features three modes: continuous display for a period of time, as an average or as a maximum. The instrument also features a 100% duty cycle, which allows the instrument to be used in an infinite alarm and record mode. The instrument is designed to be used in a wide range of applications, from the food service industry to the medical and scientific fields. This thermometer is certified, serialized and traceable to NIST's (National Institute of Standards and Technology) Calibration Laboratory and accredited by ILAC-MRA to international standards and complies with regulatory agencies.

Features and Benefits

- **McKERNIFY and McKERNIFY II** Refrigerator/Freezer Thermometer
- **TYPE I** (NIST Certified) and **TYPE II** (NIST Traceable)
- Visual LED and audible beeping alarm
- Bio-safe glycol/water probe medium
- Standard and vacuum bottles
- NIST traceable
- Min-Max range with time and date stamp
- Readouts in memory
- Low/high limits limit setting
- Not made with natural rubber and latex

Specification:

Accuracy: $\pm 0.1^{\circ}\text{C}$ (NIST 95% - 99.99%)
Display accuracy: $\pm 0.01^{\circ}\text{C}/0.01^{\circ}\text{F}$
Display range: -32°C to 125°C
Display output: 0.1°C
Alarm: beeping, temperature $\pm 0.2^{\circ}\text{C}$
Time accuracy: 1 second per day
Time display format: 12 or 24 hours format
Date display format: day or study suspension
Electronic calibration period: 2500 - 4000 hrs
Battery life: 8000 hours
Working temperature: 0°C to 125°C
Storage temperature: -32°C to 125°C
Accuracy without probe: $\pm 0.1^{\circ}\text{C}$ to $\pm 0.1^{\circ}\text{F}$ in 10 sec
Accuracy with probe: $\pm 0.1^{\circ}\text{C}$ to $\pm 0.1^{\circ}\text{F}$ in 10 sec
Probe: 1/4" stainless steel
Accessories: 21 1/8" tube, tube holder and 4" cable
14 leads

The image shows a white, rectangular McKesson Refrigerator/Freezer Thermometer. The front face features a large digital LCD screen displaying three rows of numbers: '20.17' on the top row, '1309' on the middle row, and '32.1' on the bottom row. Below the screen, the 'McKesson' logo is printed in black. To the right of the screen, a white probe is attached to the device. The probe has a long, thin, flexible shaft and a small, white, cylindrical sensor tip. The entire device is shown against a plain white background.

McKESSON

Refrigerator/Freezer Thermometer

The McKesson triple display digital thermometer simultaneously shows the current, maximum and minimum temperatures and updates continuously. An audible and visual alarm will trigger when the temperature goes above or below the set temperature. The maximum/minimum feature monitors critical temperatures for any period of time, such as overnight or weekends. To comply with regulatory requirements, time-stamped thermometers provide the date and time when the temperature limit is exceeded. The minimum and maximum settings and the real-time, also, an audible alarm will sound and the flashing LED will be visible. Each thermometer is certified, serialized and traceable to NIST via Thermco's ISO/IEC 17025 Accreditation, No. 007073, Calibration Laboratory and accredited by ILAC-MKC to ensure accuracy and compliance with regulatory agencies.

Refrigerator/Freezer Thermometer

TRIPLE DISPLAY / VISUAL & AUDIBLE ALARM

- Visual LED and audible beeping alarm
- Bio-safe glycerol/water probe medium
- Standard size vaccine bottles
- NIST traceable
- Min-Max temp with time and date stamp
- Readings in memory
- Low/high alarm limit setting
- Not made with natural rubber latex

Specifications:

Measuring range: -50 ~ 70°C (-58 ~ 158°F)

Display accuracy: ±0.2°C (±0.3°F)

Display resolution: 0.1°

Display update: 30 seconds

Alarm setting resolution: 0.1°

Time accuracy: ±1 second per day

Time display format: Day or 24 hours format

Date display format: day or only year option

Electronic calibration period: 200 ~ 2000

Battery life: 4000 hours

Working temperature: -10°C / 12 ~ 127°F

Display size: 47.9x13.9 mm

Inner cable length: 1000 mm

Probe body size: 49.5x18.4x40.0 mm (1.97x0.73x1.57 inch)

Probe size: 76.0x13.0x10.0 mm (3.0x0.51x0.39 inch)

Accessories: 32.8 mm, type AAA battery x1 sensor in tube

To comply with regulatory requirements, time-stamped thermometers provide the date and time when the temperature being monitored exceeds the minimum and maximum settings and its real-time. Also, an audible alarm will sound and the flashing LED will be visible. Each thermometer is certified, serialized and traceable to NIST in Thermapro's ISO9001 Accreditation. No. 90075 Calibration Laboratory and accredited by ILAC-MKC to assure accuracy and compliance with regulatory agencies.

Features and Benefits

McK895RY and McK895RV

Refrigerator/Freezer Thermometer

TRIPLE DISPLAY: VISUAL & AUDIBLE ALARM

- Visual LED and audible beeping alarm
- Bio-safe glycol/water probe medium
- Standard size vaccine bottles
- NIST traceable
- Min-Max temp with time and date stamp
- Readings in memory
- Low/high alarm limit setting
- Not made with natural rubber latex

Specifications:

Measuring range: -99 ~ 70°C (-148 ~ 158°F)

Display accuracy: ±0.2°C (±0.3°F)

Display resolution: 0.1°

Display update: 30 seconds

Alarm setting resolution: 0.1°

Time accuracy: ±1 second per day

Time display format: Day or 24 hours format

Date display format: day or month/year option

Electronic calibration period: 3000 ~ 3000

Battery life: 4000 hours

Working temperature: -10°C / 32 ~ 122°F

Display size: 42.9x19.1x 30 mm

Inner cable length: 1000 mm

Probe bottle size: 83.3x 14.4x 101 mm (3 1/8" bottle)

Probe size: 7.6x 1.4x 101.6 mm (3/16" probe)

Accessories: 32 L.R. rack, type AAA battery x1, sensor cable

Refrigerator/Freezer Thermometer

The McKesson triple display digital thermometer continuously shows the current, maximum and minimum temperatures and updates continuously. An audible and visual alarm will trigger when the temperature goes above or below the set temperature. The refrigerator/freezer feature maintains critical temperatures for any period of time, such as overnight or weekends. To comply with regulatory requirements, time-stamped thermometers provide the date and time when the temperature exceeds the minimum and maximum settings and its real-time. Also, an audible alarm will sound and the backup LED will be visible. Each thermometer is certified, validated and traceable to NIST via Thermovision® (certification No. 00075). Calibration Laboratory and accredited by ILAC-MKC to ensure accuracy and compliance with regulatory agencies.

Features and Benefits

McK821RFV and McK895RFV Refrigerator/Freezer Thermometer

- Visual LED and audible beeping alarm
- Bio-safe glycerol/water probe medium
- Standard size vaccine bottles
- NIST traceable
- Min-Max temp with time and date stamp
- Readings in memory
- Low/High alarm limit setting
- Not made with natural rubber latex

Specifications:

Measuring range: -50° to 70°C (-58° to 158°F)
 Display accuracy: ±0.2°C (±0.3°F)
 Display resolution: 0.1°
 Alarm setting resolution: 0.1°
 Time accuracy: ±1 second per day
 Time display format: 12 or 24 hours format
 Date display format: day/month/year option
 Effective calibration period: 2000 - 2010
 Battery life: 4000 hours
 Working temperature: 0° to 100°C / 32° to 212°F
 Display size: 42.9 x 1.3 x 0.9 mm
 Probe cable length: 1000 mm
 Probe bottle size: 10 x 10 x 40 (10 x 10 x 16) mm
 Probe size: 7.6 x 1.3 x 0.9 (10 x 10 x 16) mm
 Dimensions: 42.9 x 1.3 x 0.9 mm (10 x 10 x 16) mm
