Operating Instructions

The AQQA 8-in-1 cleaner offers multiple functionalities. Always ensure the pump is fully submerged before powering on.

1. Water Changing and Sewage Cleaning

- Attach the water pipe to the pump outlet and direct the other end into a waste bucket.
- Submerge the pump head into the aquarium water.
- Turn on the power switch. The pump will begin to draw water and waste out of the tank.
- For sewage cleaning, use the duckbill suction head to target specific areas with debris.

2. Gravel Sand Washing

- Attach the gravel sand washer head to the pump.
- Gently push the gravel washer into the substrate. The suction will draw up debris while allowing the heavier gravel to fall back down.
- Move the washer across the gravel bed to clean thoroughly.

- If it's hard to turn, pull it out and clean out the sand.

3. Suction Stool / Impurity Collection

- Use the duckbill suction head for broad surface cleaning or the corner anti-sand suction head for precise cleaning in tight spaces.
- Direct the suction head towards fish waste or other impurities on the substrate or tank bottom.

4. Filtration

- Attach the filter cup with filter cotton.
- Submerge the pump and turn it on. Water will pass through the filter cotton, trapping impurities and returning cleaner water to the tank.

5. Water Circulation

- With the pump submerged and no external hose attached, the device can be used to circulate water within the tank, promoting even temperature distribution and aiding in overall water movement.

6. Dissolved Oxygen

- Attach the adjustable air tube to the designated port.
- The pump will draw air and release bubbles into the water, increasing dissolved oxygen levels.

7. Algae Cleaning

- Attach the brush head to the pump.
- Gently scrub algae from tank surfaces, rocks, and decorations while the pump suctions away the dislodged debris.

8. Turtle Shower

- Attach the shower head accessory.

Cleaning the Pump Impeller

It is crucial to clean the pump impeller regularly to prevent blockages and maintain strong suction.

1. **Step 1:** Disconnect the power supply.
2. **Step 2:** Unscrew the bottom cap of the pump body.
3. **Step 3:** Carefully remove the impeller cover.
4. **Step 4:** Extract the impeller.
5. **Step 5:** Rinse the impeller and its housing under clean water to remove any debris, hair, or slime.

6. **Step 6:** Reassemble the impeller, cover, and cap in reverse order, ensuring all parts are securely fitted.

General Cleaning

- Periodically check the filter cotton in the filter cup and replace it when it becomes heavily soiled to maintain filtration efficiency.

Troubleshooting

If you encounter issues with your AQQA Fish Tank Cleaner, refer to the following common problems and solutions:

- No Suction or Weak Suction:**

- Ensure the pump is fully submerged in water.
- Check for blockages in the intake nozzle, extension tubes, or impeller. Clean the impeller as described in the Maintenance section.

- Verify all connections are tight and there are no air leaks in the system.

- **Water Leaking from Connections:**

- Ensure all screw-on and plug-in parts are securely fastened.
- Check O-rings and seals for proper placement and damage. Replace if necessary.

- **Pump Not Turning On:**

- Verify the power cord is securely plugged into a working outlet.
- Check the inline power switch to ensure it is in the 'ON' position.
- Inspect the power cord for any visible damage.

- **Hose Detaches During Use:**

- Ensure the hose is firmly attached to the pump outlet. Consider using a clamp if available to secure the connection, especially during vigorous movement.
