Assembly Instructions

It is recommended to assemble the bed frame with two adults. Clear a spacious area and lay out all components on a soft surface to prevent scratches.

1. **Attach Side Rails to Headboard and Footboard:** Connect the side rails to the headboard and footboard using the provided screws and Allen wrench. Ensure all connections are secure but do not fully tighten until all major components are in place.

3. **Place Metal Slats:** Position the metal slats across the bed frame, ensuring they are evenly spaced and securely fitted into the designated slots or attached with screws as per the specific design. The bed frame includes 12 metal

slats for robust mattress support.

4. **Secure All Connections:** Once all components are in place, fully tighten all screws and bolts. Do not overtighten.
5. **Attach Decorative Elements (if applicable):** Secure any decorative elements, such as the candle-like ball decorations on the headboard and footboard, if they are separate components.

Operating Instructions

Once assembled, place your mattress directly onto the metal slats. No box spring is needed. The bed frame is designed to accommodate mattresses between 8-12 inches thick. The embedded mattress design helps prevent sliding or shaking, contributing to a peaceful sleep environment.

Maintenance

To maintain the appearance and longevity of your bed frame, wipe it with a dry cloth as needed. Avoid using harsh chemicals or abrasive cleaners, which can damage the powder-coated finish. Regularly check all screws and bolts to ensure they remain tight. The frame's surface powder coating is electrostatically sprayed for rust and wear resistance.

Troubleshooting

Squeaking Noises

If you experience squeaking noises, check the following:

- **Tighten all bolts:** Ensure all assembly bolts are securely tightened. Loose connections are a common cause of squeaking.
- **Check silent foam strip:** The center beam of this bed frame includes a silent foam strip designed to prevent squeaking from friction between metal and the mattress. Ensure this strip is properly in place.
- **Verify screw washers:** Each support leg features a screw design with a metal washer to prevent abnormal noise. Confirm these are correctly installed.
