5. Operating Instructions

5.1 Attaching the Screen Sensor Clip

Position the screen sensor clip on your e-reader so that its silicone pad makes contact with the screen. This simulates a finger tap. Adjust your e-reader's margin settings if necessary to prevent the clip from covering text.

Important Tips:

The thickness of your device with case can not exceed **0.45inch** otherwise the page turner will not work properly.

Important Tip: The total thickness of your device, including any case, should not exceed 0.45 inches (1.14 cm) for proper functionality of the page turner.

5.2 Turning Pages

Once the clip is attached and paired, simply press the button on the remote control to turn the page forward. For devices that support it, you can also clip the sensor on the left side to turn pages backward.

7. Maintenance

- Keep the device clean by wiping with a soft, dry cloth.
- Avoid exposing the device to extreme temperatures, moisture, or direct sunlight.
- Store the remote and clip together to prevent misplacement, especially given their magnetic design.

8. Troubleshooting

- **Device not turning on:** Ensure both the remote and clip are fully charged.
- **Not pairing:** Make sure both devices are powered on and within close proximity. Repeat the pairing steps (Section 4.2).
- **Page turning not working:**
 - a. Verify the screen sensor clip's silicone pad is making proper contact with the e-reader screen.
 - b. Check if your device's total thickness (with case) exceeds 0.45 inches, which can prevent proper contact.
 - c. Ensure the clip is not covering any essential parts of the screen or interfering with the e-reader's interface.
- **Incorrect page turning (e.g., backward instead of forward):** Adjust the clip's position on the screen. For most e-readers, placing the clip on the right side of the screen will turn pages forward.
