OLEVS Men's Luminous Chronograph Watch - Model XLYDE-S-G2872PZ-GL Instruction Manual

Your guide to setting up, operating, and maintaining your OLEVS timepiece.

INTRODUCTION

Thank you for choosing the OLEVS Men's Luminous Chronograph Watch, Model XLYDE-S-G2872PZ-GL. This watch combines classic design with modern functionality, featuring a multi-chronograph, date display, and luminous hands for enhanced visibility. Please read this manual carefully to understand how to properly use and care for your watch.

The OLEVS Men's Luminous Chronograph Watch, Model XLYDE-S-G2872PZ-GL, featuring a blue dial and brown leather strap.

SETUP INSTRUCTIONS

Before first use, ensure the crown is fully pushed in. If the watch is not running, it may need to be set and activated.

1. Setting the Time

1. Pull the crown out to position **2**.
2. Rotate the crown to move the hour and minute hands to the desired time.
3. Push the crown back into position **0** to start the watch.

2. Setting the Date

1. Pull the crown out to position **1**.
2. Rotate the crown clockwise or counter-clockwise (depending on the model) until the correct date appears in the date window.

3. Push the crown back into position **0**.

Note: Avoid setting the date between 9 PM and 3 AM, as this can interfere with the automatic date change mechanism.

3. Chronograph Hand Alignment (if necessary)

If the chronograph hands (sub-dials) are not aligned to the zero position, follow these steps:

1. Pull the crown out to position **2**.
2. Press the **top pusher (A)** repeatedly to adjust the 1/10 second hand to zero.
3. Press the **bottom pusher (B)** repeatedly to adjust the chronograph second hand and chronograph minute hand to zero.
4. Once all chronograph hands are aligned to zero, push the crown back into position **0**.

OPERATING INSTRUCTIONS

1. Basic Time Reading

The watch displays time using traditional hour, minute, and second hands on the main dial.

2. Using the Chronograph (Stopwatch)

- To **start** the chronograph, press the **top pusher (A)**. The chronograph second hand will begin to move.
- To **stop** the chronograph, press the **top pusher (A)** again. The chronograph hands will stop, indicating the elapsed time.
- To **reset** the chronograph to zero, press the **bottom pusher (B)** while the chronograph is stopped.

3. Date Display

The current date is displayed in the small window on the dial, typically at the 3 o'clock position.

4. Luminous Function

The watch hands and hour markers are coated with a luminous material. After exposure to light, they will glow in dark conditions, providing visibility.

5. Water Resistance

This watch is rated for 30 meters (3 ATM) water resistance. This means it is suitable for daily use, such as splashes, rain, or brief immersion in water. It is **not suitable** for swimming, diving, showering with hot water, or any activities involving prolonged water exposure or high-pressure water jets. Always ensure the crown is fully pushed in before any contact with water.

The watch features 30M water resistance and luminous elements for visibility in low light.

MAINTENANCE

1. Cleaning

Wipe the watch case and strap regularly with a soft, dry cloth. For the leather strap, avoid excessive moisture and harsh cleaning agents, which can damage the material.

2. Water Resistance Precautions

- Do not operate the crown or pushers when the watch is wet or submerged in water.
- Avoid exposing the watch to extreme temperature changes, such as moving from a hot sauna to cold water, as this can compromise the water seals.
- If condensation appears inside the watch, it indicates a breach in the water resistance. Seek professional service immediately.

3. Battery Replacement

This watch is powered by a quartz movement and requires a battery (1 LR44, included). The typical battery life is 1-2 years. When the watch stops or the second hand starts skipping, it's time for a battery replacement. We recommend having the battery replaced by a qualified watch technician to ensure proper sealing and maintain water resistance.

4. Storage

When not wearing your watch, store it in a dry place, away from direct sunlight and strong magnetic fields (e.g., speakers, refrigerators), which can affect its accuracy.

TROUBLESHOOTING

Problem	Possible Cause	Solution
Watch not running	Crown not pushed in; depleted battery.	Ensure crown is fully pushed to position 0. If still not running, battery may need replacement.
Time/Date incorrect	Needs adjustment.	Refer to 'Setting the Time' and 'Setting the Date' sections.
Chronograph hands not resetting to zero	Misalignment.	Refer to 'Chronograph Hand Alignment' section.
Condensation inside watch	Water ingress.	Seek professional watch repair immediately to prevent further damage.

SPECIFICATIONS

Feature	Detail
