TROUBLESHOOTING

No Audio / Disconnecting Audio

- **Check Power:** Ensure the headset is powered on and fully charged.
- **Re-pair:** Turn off both the headset and the USB wireless transmitter. Then, power them back on to re-establish the connection.

- **USB Transmitter Placement:** Ensure the USB transmitter is securely plugged into a working USB port. For PlayStation 5 users, consider using a USB 3.0 extender cable to position the dongle away from the console's direct heat and potential interference, as the 2.4GHz band can be sensitive to surrounding frequencies.
- **Wi-Fi Interference (PS5 Specific):** If experiencing frequent disconnections on PS5, navigate to *Settings > Network > Settings > Set Up Internet Connection*. While hovering over your Wi-Fi, press the Options button and set *Wi-Fi Frequency Bands* to *5 GHz only* (not automatic). This can help reduce interference with the headset's 2.4GHz wireless signal.
- **Bluetooth Connection:** If using Bluetooth, ensure the headset is paired correctly and within range of your device. Use the QuickSwitch button to confirm you are on the correct input mode.

Microphone Not Working

- **Check Mute Status:** Ensure the microphone is flipped down to unmute.
- **Device Settings:** Verify that the Stealth 600 is selected as the default input device in your console or PC sound settings.
- **Swarm II App:** Use the Swarm II app to check microphone sensitivity and noise gate settings.

Poor Audio Quality / Distortion

- **Volume Levels:** Adjust both the headset volume and the device's volume to appropriate levels.
- **EQ Settings:** Experiment with different EQ presets or custom settings in the Swarm II app.
- **Interference:** Move away from other wireless devices that might cause interference.
