SETUP: SETTING YOUR PERSONAL COMBINATION

Your ANVIL luggage lock comes with a default combination of **0-0-0**. Follow these steps to set your personalized combination:

1. Ensure the lock is set to the default combination (0-0-0) and is open.
2. Locate the small reset button or switch on the side or bottom of the lock. Use a pen or a pointed object to push and hold this button/switch to the right.
3. While holding the reset button/switch, rotate the dials to your desired 3-digit combination. Make sure the numbers are clearly aligned in the viewing window.
4. Release the reset button/switch. Your new combination is now set. Test the new combination by scrambling the dials and then entering your new code to open the lock.

Important: Remember your new combination. There is no master key for user-set combinations. The keyhole on the lock is exclusively for TSA agents to open the lock using their universal master keys without damaging it.

OPERATING INSTRUCTIONS

Locking Your Luggage:

1. Thread the cable through the zipper pulls of your luggage or the designated locking points.
2. Insert the cable ends into the locking mechanism until they click securely into place.
3. Scramble the dials to a random set of numbers to secure the lock.

Unlocking Your Luggage:

1. Rotate the dials to your personal 3-digit combination.
2. Press the release button (if applicable) or pull the cable ends to open the lock.

TSA Inspection Indicator:

Your ANVIL lock features a red pop-up indicator. If the Transportation Security Administration (TSA) has opened your luggage for inspection using their master key, this red indicator will be visible. This feature provides peace of mind, allowing you to know if your bag has been accessed during transit.

MAINTENANCE

To ensure the longevity and smooth operation of your ANVIL luggage lock, follow these simple maintenance guidelines:

- **Cleaning:** Wipe the lock with a soft, dry cloth to remove dust and grime. Avoid using abrasive cleaners or solvents, as these can damage the finish or internal mechanisms.
- **Lubrication:** If the dials become stiff over time, a small amount of silicone-based lubricant can be applied to the moving parts. Do not use oil-based lubricants.
- **Storage:** Store the lock in a dry place when not in use to prevent corrosion.

TROUBLESHOOTING

Lock Will Not Open:

- **Incorrect Combination:** Double-check that you have entered the correct 3-digit combination and that the numbers are perfectly aligned.

- **Dials Stiff:** If the dials are stiff, try gently wiggling them while entering the combination. Apply a small amount of silicone lubricant if necessary.

Forgotten Combination:

Unfortunately, if you forget your personal combination, there is no way to reset it without knowing the original code. The TSA keyhole is for official use only and cannot be used to reset a forgotten user combination. It is recommended to keep a record of your combination in a secure place.
