match the product title (A-ZUM CC2117). This ensures proper functionality and prevents damage to your lock mechanism.

# Where to Find Your Lock Code

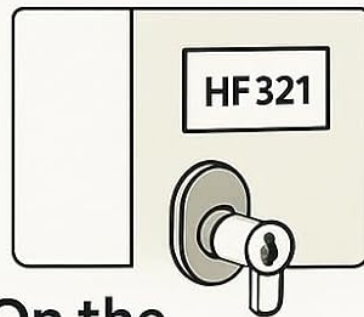

**On the Key**

**On the Lock Face**

**On a Label Inside/  
Behind the Lock**

**On the  
Cabinet/Door Label**

## Important Notes

- Order by Manufacturer → Lock codes are manufacturer-specific.
- Key Cuts Differ → Even if codes look similar, they vary by brand.

*Figure 2: Where to Find Your Lock Code. This diagram illustrates common locations where you can find the lock code for your A-ZUM system. The code may be stamped directly on your existing key, engraved on the face of the lock cylinder, printed on a label located inside or behind the lock mechanism, or found on a label affixed to the cabinet or door that the lock*

secures. Always verify your lock code and manufacturer to ensure compatibility with the replacement key.

## 2.2 Important Notes for Key Selection

- **Order by Manufacturer:** Lock codes are specific to the manufacturer. A code from one brand may not work with another, even if the numbers appear similar.
- **Key Cuts Differ:** Even if lock codes look similar across different brands, the actual key cuts (bitting) vary significantly by manufacturer. Always confirm both the code and the manufacturer.

## 3. OPERATING INSTRUCTIONS

### 3.1 Using Your Replacement Key

To operate your A-ZUM lock with the CC2117 replacement key, follow these steps:

1. **Insert the Key:** Gently insert the key into the lock cylinder. Do not force the key if it does not slide in smoothly.
2. **Turn the Key:** Once fully inserted, turn the key in the direction required to lock or unlock the mechanism.
3. **Remove the Key:** After the lock operates, return the key to its original position (usually vertical) before removing it from the cylinder.

## 4. CARE AND MAINTENANCE

### 4.1 General Care

Proper care will extend the life of your replacement key and ensure reliable operation:

- **Keep Clean:** Periodically wipe the key with a soft, dry cloth to remove dirt or debris. Avoid using harsh chemicals.
- **Avoid Force:** Never force the key into a lock or attempt to turn it if it feels stuck. This can damage both the key and the lock.
- **Proper Storage:** Store the key in a dry place, away from extreme temperatures or corrosive materials.
- **Inspect for Wear:** Regularly check the key for signs of wear, bending, or damage. A worn key may not operate the lock correctly.

## 5. TROUBLESHOOTING

### 5.1 Key Does Not Work

If your replacement key does not operate the lock, consider the following:

- **Incorrect Key:** Double-check that the lock code (CC2117) and manufacturer (A-ZUM) on your lock match the key. Refer to Section 2.1 for identification.
- **Obstruction in Lock:** Inspect the lock cylinder for any debris, dirt, or foreign objects that might be preventing the key from fully inserting or turning.
- **Damaged Lock:** The lock mechanism itself might be damaged or worn. If other keys also fail to operate the lock, professional inspection may be required.
- **Key Damage:** Examine the key for any visible damage, bending, or excessive wear that could affect its ability to engage the lock tumblers.
