IMPORTANT COMPATIBILITY NOTE

This adapter is a uni-directional cable, meaning it converts from a USB-C source to an HDMI display. It is crucial to note that **not all USB-C interfaces are compatible**. The adapter only functions with USB-C 3.1 or Thunderbolt 3 port interfaces that support *"DisplayPort Alternate Mode"* (Alt Mode). Please verify your device's USB-C port specifications before use.

TROUBLESHOOTING

No Display/Signal:

- Check that the display device is set to the correct HDMI input source.
- Try connecting the adapter to a different USB-C port on your source device, if available.
- Test with a different HDMI cable, especially if aiming for 4K resolution (ensure it's an HDMI 2.0 cable).
- Restart your source device.

Low Resolution/Flickering Display:

- Ensure your HDMI cable is capable of supporting the desired resolution (e.g., HDMI 2.0 for 4K@30Hz).
- Check your source device's display settings to ensure the output resolution is set correctly.
- Verify that your display device supports the desired resolution.

No Audio:

- Ensure your display device's volume is turned up and not muted.
- Check your source device's audio output settings to ensure audio is being routed through the HDMI output.
