# IPG Screen Protector User Manual

Model: IPG 3900

## ABOUT YOUR IPG SCREEN PROTECTOR

---

The IPG Screen Protector is designed to safeguard your Cilico C80 C80R Handheld and other compatible devices from scratches, scuffs, and daily wear and tear. Crafted from aerospace-grade patented material, this screen protector offers exceptional durability and features self-healing properties for existing scratches. It is UV protected and engineered to be fully compatible with touch screen technology, ensuring no interference with device functionality. The virtually invisible design maintains the original look and feel of your device while providing robust protection.

## WHAT'S INCLUDED

Your IPG Screen Protector package typically includes the following items:

- IPG Screen Protector(s) (Quantity as per package, e.g., 6 units for C80 C80R Handheld)
- Installation Card (for squeegeeing)
- Soft Dry Cloth
- Installation Instructions (this manual)

## INSTALLATION GUIDE

---

For optimal results, perform the installation in a clean, dust-free environment. Follow these steps carefully:

- 1. Wash your hands:** Ensure your hands are thoroughly clean to prevent transferring oils or dirt to the screen protector or device.
- 2. Turn off your device:** Power off your device completely before beginning the installation.
- 3. Prepare mixture of water and some dishwashing detergent:** Mix a small amount of dishwashing detergent with water in a clean bowl. This solution will aid in positioning the protector and removing bubbles.
- 4. Wipe off device with soft dry cloth:** Use the provided soft dry cloth to meticulously clean the device screen, removing any dust, smudges, or fingerprints.
- 5. Wet your finger tips:** Lightly wet your fingertips with the prepared water-detergent mixture. This prevents fingerprints on the adhesive side of the protector.
- 6. Peel the IPG from backing:** Carefully peel the IPG screen protector from its backing film. Avoid touching the adhesive side directly.
- 7. Wet the adhesive side of the IPG with your finger tips:** Gently wet the adhesive side of the screen protector with your wet fingertips. This allows for repositioning during application.
- 8. Align the IPG to the device:** Carefully align the screen protector with your device's screen. The wet application allows for minor adjustments.
- 9. Use IPG installation card to squeegee out bubbles and water:** Start from the center of the screen

and gently push outwards towards the edges using the installation card. Ensure all bubbles and excess water are removed. Pay attention to avoid open ports.

10. **Use your palm for the corners. Hold the device in your palm for 1-2 mins. If it looks foggy do not panic. Let it dry for 12 hours:** After squeegeeing, gently press down on the corners with your palm for a minute or two to help the edges adhere. It is normal for the screen to appear foggy or have small bubbles immediately after installation; these will disappear as the protector dries. Allow at least 12 hours for complete drying and adhesion.

## USAGE AND PERFORMANCE

The IPG Screen Protector is designed to seamlessly integrate with your device, offering uncompromised performance. It is touch screen technology friendly, ensuring that your device's responsiveness remains unaffected. The anti-fingerprint and oleophobic coating helps to keep your screen clear and free from smudges, providing a consistently clear viewing experience.

## CARE AND MAINTENANCE

---

To maintain the clarity and effectiveness of your IPG Screen Protector, simply wipe it clean with a soft, lint-free cloth. For stubborn smudges, a slightly damp cloth can be used. Avoid harsh chemicals or abrasive materials, as these may damage the protector's surface or coatings.

### TROUBLESHOOTING TIPS

**Foggy Appearance or Small Bubbles:** It is common for the screen protector to appear foggy or have small bubbles immediately after the wet installation. This is normal and part of the drying process. Do not attempt to re-squeegee or remove the protector. Allow at least 12 hours for the protector to fully dry and adhere. Most fogging and small bubbles will disappear naturally during this period.

**Dust or Debris Underneath:** If dust or debris is trapped under the protector, it indicates that the screen was not completely clean before application. While the wet application allows for some repositioning, it is difficult to remove trapped particles once the adhesive begins to set. Prevention through thorough cleaning is key.
