

APC BE900G3, BE500G3

APC Back-UPS Series User Manual

Models: BE900G3 (900VA) and BE500G3 (500VA)

1. INTRODUCTION

This user manual provides essential information for the installation, operation, and maintenance of your APC Back-UPS Series uninterruptible power supply (UPS). This series includes two models: the **BE900G3 (900VA/540W)** and the **BE500G3 (500VA/300W)**. Both models are designed to protect your electronic equipment from power outages, surges, and spikes, ensuring continuous operation and safe shutdown of connected devices.

Please read this manual thoroughly before installing or operating your Back-UPS unit. Keep this manual for future reference.

2. SAFETY INFORMATION

Observe the following safety precautions during installation and operation of your UPS unit:

- **Electrical Safety:** Connect the UPS to a grounded outlet only. Do not remove the grounding prong from the power cord.
- **Indoor Use Only:** This UPS is intended for indoor use in a controlled environment. Avoid exposure to excessive moisture, direct sunlight, or extreme temperatures.
- **Battery Safety:** The battery contains hazardous chemicals. Refer to the Maintenance section for battery replacement instructions. Do not dispose of batteries in a fire; they may explode.
- **Ventilation:** Ensure adequate airflow around the UPS. Do not block ventilation openings.
- **Overload:** Do not overload the UPS. Refer to the Specifications section for maximum load capacity.

3. PRODUCT OVERVIEW

The APC Back-UPS Series provides reliable power protection for your home or small office electronics. Both models feature battery backup outlets, surge-only outlets, and USB charging ports.

3.1. Model BE900G3 (900VA / 540W)

This higher-capacity model is suitable for multiple PCs, networking equipment, and home entertainment

systems. It offers extended runtime for critical devices.

- **Total Outlets:** 8 (NEMA 5-15R)
- **Battery Backup & Surge Protection Outlets:** 6
- **Surge Protection Only Outlets:** 2
- **USB Charging Ports:** 1 USB-C, 1 USB-A (5V/3A Shared)
- **User Replaceable Battery:** Yes (RBC17)
- **Data Port:** For PowerChute UPS management software (Windows 10, 11 Pro; Mac OS uses native Energy Saver settings)

3.2. Model BE500G3 (500VA / 300W)

This compact model is ideal for essential devices such as routers, modems, and internet phones, ensuring connectivity during brief power interruptions.

- **Total Outlets:** 6 (NEMA 5-15R)
- **Battery Backup & Surge Protection Outlets:** 4
- **Surge Protection Only Outlets:** 2
- **USB Charging Ports:** 1 USB-C, 1 USB-A (5V/3A Shared)
- **User Replaceable Battery:** Yes (RBC17)

3.3. Common Features

- **Automatic Voltage Regulation (AVR):** Corrects minor voltage fluctuations without using battery power, extending battery life.
- **Surge Protection:** Protects connected equipment from damaging power surges and spikes.
- **Circuit Breaker:** Resettable circuit breaker for overload protection.
- **Building Wiring Fault Indicator:** Alerts to potential wiring issues in the wall outlet.

4. SETUP

Follow these steps to set up your APC Back-UPS unit:

1. **Unpack the UPS:** Carefully remove the UPS and all accessories from its packaging. Inspect for any shipping damage.
2. **Connect the Battery:** The battery may be disconnected for shipping. Refer to the Maintenance section for instructions on connecting the internal battery.
3. **Initial Charge:** Plug the UPS power cord into a grounded wall outlet. Allow the unit to charge for at least 24 hours before connecting any equipment to ensure maximum battery runtime. The UPS will charge whether it is turned on or off.
4. **Connect Equipment:**
 - **Battery Backup & Surge Protection Outlets:** Connect critical equipment such as computers, monitors, routers, and modems to these outlets. These devices will receive power from the battery during an outage.
 - **Surge Protection Only Outlets:** Connect non-critical equipment like printers, scanners, or lamps

to these outlets. These outlets provide surge protection but no battery backup.

5. **Connect USB Charging Ports:** Use the USB-C and USB-A ports to charge compatible mobile devices.
6. **(BE900G3 Only) Connect Data Port:** For advanced power management and automatic shutdown features, connect the supplied USB cable from the UPS data port to your computer. Install APC PowerChute software (available for Windows) or configure native energy saver settings (for Mac OS).
7. **Turn On the UPS:** Press the power button on the front of the unit. The power indicator will illuminate.

5. OPERATING INSTRUCTIONS

5.1. Power Button and Indicators

The front panel features a power button and LED indicators that provide status information:

- **Power Button:** Press to turn the UPS on or off.
- **Power On Indicator:** Illuminates when the UPS is on and receiving utility power.
- **On Battery Indicator:** Flashes or illuminates when the UPS is operating on battery power during an outage.
- **Overload Indicator:** Illuminates if the connected load exceeds the UPS capacity.
- **Building Wiring Fault Indicator:** Illuminates if there is a wiring problem in the wall outlet (e.g., missing ground).

Image: A detailed view of the APC Back-UPS control panel, showing the power button, LED indicators, and the USB charging ports.

5.2. Automatic Voltage Regulation (AVR)

Your Back-UPS unit includes AVR, which automatically corrects minor voltage fluctuations (sags and surges) without switching to battery power. This feature helps to preserve battery life and ensures a stable power supply to your connected devices.

5.3. Power Outage Operation

During a power outage, the UPS will automatically switch to battery power. An audible alarm will sound, and the 'On Battery' indicator will illuminate. The alarm will typically sound every 30 seconds. When utility power returns, the UPS will automatically switch back to utility power and recharge its battery.

If the power outage is prolonged, save your work and shut down your computer and other connected devices gracefully before the UPS battery is depleted. The BE900G3, when connected via its data port, can initiate an automatic shutdown of your computer.

6. MAINTENANCE

6.1. Battery Replacement

The batteries in your APC Back-UPS are user-replaceable. The typical battery life is 3-5 years, depending on usage and environmental conditions. When the battery needs replacement, the UPS will typically indicate this with an audible alarm and/or an LED indicator.

Replacement Battery Model: RBC17 (sold separately)

Procedure:

1. Turn off the UPS and disconnect it from the wall outlet.
2. Disconnect all connected equipment from the UPS.
3. Locate the battery compartment (usually on the bottom or side of the unit).
4. Follow the instructions on the battery compartment cover to open it and disconnect the old battery.

5. Insert the new RBC17 battery, ensuring correct polarity.
6. Close the battery compartment and reconnect the UPS to the wall outlet. Allow it to charge for 24 hours.

Warning: Only use genuine APC replacement batteries. Using non-APC batteries may void your warranty and could be unsafe.

6.2. Cleaning

Clean the exterior of the UPS with a soft, dry cloth. Do not use liquid or aerosol cleaners. Ensure ventilation openings are free from dust and debris.

6.3. Storage

If storing the UPS for an extended period, charge the battery for 24 hours every 3-6 months to prevent battery degradation.

7. TROUBLESHOOTING

Refer to the table below for common issues and their solutions:

Problem	Possible Cause	Solution
UPS does not turn on	Battery not connected or discharged	Ensure battery is connected. Plug UPS into wall outlet and charge for 24 hours.
UPS beeps continuously or 'Overload' LED is on	Overload condition	Disconnect non-essential equipment from battery backup outlets. Reduce the total load.
UPS does not provide expected runtime	Battery is old or not fully charged	Replace battery if old. Ensure UPS is charged for 24 hours.
'Building Wiring Fault' LED is on	Wiring problem in wall outlet	Consult a qualified electrician to inspect the building wiring.
UPS is on but connected devices are not powered	Circuit breaker tripped	Press the circuit breaker button on the rear of the UPS to reset it.

8. SPECIFICATIONS

Feature	BE900G3	BE500G3
Capacity (VA/Watts)	900VA / 540W	500VA / 300W
Input Voltage	120V AC	120V AC
Output Voltage (On Battery)	120V AC	120V AC
Total Outlets	8 (NEMA 5-15R)	6 (NEMA 5-15R)
Battery Backup Outlets	6	4

Feature	BE900G3	BE500G3
Surge Only Outlets	2	2
USB Charging Ports	1 USB-C, 1 USB-A (5V/3A Shared)	1 USB-C, 1 USB-A (5V/3A Shared)
User Replaceable Battery	Yes (RBC17)	Yes (RBC17)
Data Port	USB (for PowerChute)	No
Form Factor	Compact	Compact
Color	White	White
Power Plug Type	Type B - 3 pin (North American)	Type B - 3 pin (North American)

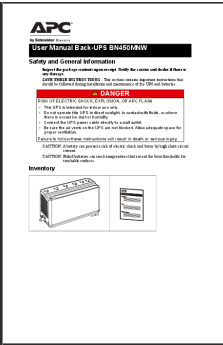

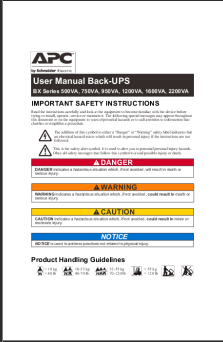

9. WARRANTY AND SUPPORT

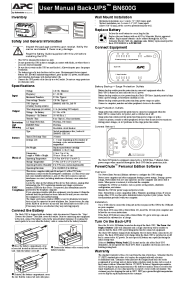

APC provides a standard warranty for its Back-UPS products. For specific warranty terms and conditions, please refer to the warranty card included with your product or visit the official APC website. Keep your proof of purchase for warranty claims.

For technical support, troubleshooting assistance, or to inquire about replacement parts, please contact APC Customer Support through their official website or the contact information provided in your product packaging.
