SagaSave Universal Strimmer Trimmer Head

SagaSave Universal Strimmer Trimmer Head Instruction Manual

Model: Universal Strimmer Trimmer Head

1. Product Overview

The SagaSave Universal Strimmer Trimmer Head is designed as a replacement bump feed head for various brush cutters and strimmers. It features a durable hardened plastic construction and a double-line system for efficient grass trimming and thinning. This head is suitable for maintaining low grass and achieving a neat finish.

Key Features:

- **Material:** High-quality hardened plastic for durability.
- **Double Line System:** For effective cutting and thinning of grass.
- **Easy Line Replacement:** Designed for quick and simple nylon thread changes.
- **Bump Feed Mechanism:** Automatically adjusts cutting line length by tapping the head on the ground.
- **Wide Compatibility:** Fits most common brush cutters with left-hand threads.

2. Safety Information

Always prioritize safety when operating power tools. Failure to follow these safety guidelines may result in serious injury.

- **Read the Manual:** Before installation or operation, read and understand this manual and your brush cutter's manual.
- **Personal Protective Equipment (PPE):** Always wear safety glasses or a face shield, hearing protection, long pants, sturdy footwear, and gloves.
- **Inspect Equipment:** Before each use, inspect the trimmer head and brush cutter for any damage, loose parts, or worn components. Do not use if damaged.
- **Clear Work Area:** Ensure the work area is clear of bystanders, pets, and debris that could be thrown by the trimmer line. Maintain a safe distance.
- **Proper Grip:** Maintain a firm grip on the brush cutter handles during operation.
- **Avoid Obstacles:** Be aware of rocks, fences, and other hard objects that can damage the trimmer line or head, or cause kickback.
- **Disconnect Power:** Always disconnect the spark plug wire (for gas models) or remove the battery/unplug (for electric models) before performing any maintenance, adjustments, or installation.

3. Setup and Installation

This section details the steps for installing the SagaSave Universal Strimmer Trimmer Head onto your compatible brush cutter.

1. **Prepare Your Brush Cutter:** Ensure your brush cutter is turned off and the spark plug wire is disconnected (for gasoline models) or the battery is removed/power cord unplugged (for electric models).
2. **Remove Existing Head:** If an old trimmer head is present, remove it according to your brush cutter's manufacturer instructions. This typically involves unscrewing it from the shaft, often requiring a locking pin or tool to hold the shaft stationary.

3. **Identify Thread Type:** Confirm your brush cutter has a left-hand threaded shaft. The SagaSave head is designed for this type of thread.
4. **Attach New Trimmer Head:** Align the SagaSave Universal Strimmer Trimmer Head with the threaded shaft of your brush cutter. Turn the head clockwise to tighten it securely onto the shaft. Ensure it is hand-tightened firmly. Do not overtighten with tools, as this may damage the threads.
5. **Verify Secure Attachment:** Gently tug on the installed head to ensure it is securely fastened and does not wobble.

4. Operating Instructions

Follow these steps for safe and effective operation of your trimmer head.

1. **Pre-Operation Check:** Before starting the brush cutter, ensure the trimmer head is securely attached and the cutting line is properly extended.
2. **Start Brush Cutter:** Start your brush cutter according to its manufacturer's instructions.
3. **Trimming Technique:** Hold the brush cutter firmly with both hands. Use a sweeping motion to cut grass. Avoid hitting hard surfaces or objects with the trimmer line.
4. **Bump Feed Operation:** To advance the cutting line, gently tap the bottom of the rotating trimmer head on firm ground while the engine is running at operating speed. The bump feed mechanism will release a small amount of

line. The line limiter blade on your brush cutter's guard will automatically cut the line to the correct length.

5. **Maintain Line Length:** Regularly check the line length and bump feed as needed to maintain optimal cutting performance.
6. **Shut Down:** When finished, turn off the brush cutter and allow the trimmer head to come to a complete stop before setting the tool down.

Image 4.2: A close-up view of a strimmer actively cutting grass, showing the trimmer head in operation.

5. Maintenance

Regular maintenance ensures the longevity and optimal performance of your trimmer head.

5.1. Replacing the Trimmer Line

The nylon cutting line will wear down with use and needs to be replaced. Always use a line with the specified diameter (2.4mm for this model).

1. **Disconnect Power:** Ensure the brush cutter is off and disconnected from its power source.
2. **Remove Old Line:** If any old line remains, pull it out from the eyelets.
3. **Open Trimmer Head:** The SagaSave trimmer head is designed for easy line replacement. Typically, you will press tabs or unscrew a cap to open the head and access the spool. Refer to the image below for visual guidance on the line exit points.

4. **Wind New Line:** Take a new length of 2.4mm nylon trimmer line. Follow the arrows or guides on the spool to wind the line evenly. Ensure both ends of the line are of equal length.
5. **Feed Line Through Eyelets:** Feed the ends of the new line through the eyelets on the trimmer head casing.
6. **Reassemble Head:** Securely reassemble the trimmer head, ensuring all parts click into place or are screwed tightly.

Image 5.1: A close-up view showing the nylon trimmer line exiting the head through the designated eyelet.

5.2. Cleaning and Storage

- **Clean After Use:** After each use, clean the trimmer head to remove grass clippings, dirt, and debris. Use a brush or cloth.
- **Inspect for Damage:** Periodically inspect the head for cracks, excessive wear, or other damage. Replace if necessary.
- **Storage:** Store the trimmer head in a clean, dry place, away from direct sunlight and extreme temperatures.

6. Troubleshooting

This section addresses common issues you might encounter with your trimmer head.

Problem	Possible Cause	Solution
Trimmer line does not advance when bumped.	◦ Line is tangled or fused inside the spool. ◦ Line is too short. ◦ Head is not bumped firmly enough. ◦ Spool is empty.	◦ Disconnect power, open head, untangle/rewind line. ◦ Replace line if too short. ◦ Bump the head more firmly on hard ground. ◦ Replace the trimmer line.
Trimmer head vibrates excessively.	◦ Head not securely attached. ◦ Damaged or unbalanced head. ◦ Incorrect line length (one side longer).	◦ Disconnect power, re-tighten head. ◦ Inspect head for damage; replace if necessary. ◦ Ensure line is evenly distributed and cut to proper length by the guard.
Line breaks frequently.	◦ Using incorrect line diameter. ◦ Hitting hard objects. ◦ Line is old or brittle.	◦ Use 2.4mm diameter line. ◦ Avoid contact with hard surfaces. ◦ Replace with fresh, high-quality trimmer line.

If you encounter issues not listed here or if the problem persists, please contact SagaSave customer support.

7. Specifications

Detailed specifications for the SagaSave Universal Strimmer Trimmer Head.

- **Model:** Universal Strimmer Trimmer Head
- **Material:** Hardened Plastic
- **Color:** Red
- **Diameter:** 12.5 cm (4.9 inches)
- **Thickness:** 4 cm (1.6 inches)
- **Recommended Rope/Line Size:** 2.4 mm
- **Weight:** Approximately 7 ounces (0.2 kg)
- **Compatibility:** Most brush cutters with left-hand threads (e.g., Michigan, MTM, Bauholtz, BBT, Dynamic Power Baumr-AG).
