LA SOMMELIERE CIG650

La Sommeliere Electronic Humidifying Cigar Cabinet Humidor

Model: CIG650
Brand: LA SOMMELIERE

Introduction

The La Sommeliere CIG650 Electronic Humidifying Cigar Cabinet Humidor is designed to provide optimal storage conditions for your cigars, preserving their full aromas and quality. This appliance features precise electronic temperature and humidity control, a digital display, and a secure, UV-protected glass door. With a capacity of 650 cigars and three sliding wooden oak drawers, it offers an ideal environment for cigar enthusiasts.

Safety Information

Please read all instructions carefully before using the appliance. Retain this manual for future reference.

- Ensure the appliance is placed on a stable, level surface away from direct sunlight or heat sources.
- Do not block ventilation openings.
- Connect to a grounded power outlet only.
- Do not allow children to operate or play with the appliance.
- Unplug the appliance before cleaning or performing any maintenance.
- Avoid placing heavy objects on top of the unit.

Setup

1. Unpacking

Carefully remove the humidor from its packaging. Inspect for any shipping damage. Keep all packaging materials until you are satisfied with the product's condition and operation.

2. Placement

Place the humidor in a well-ventilated area, away from direct sunlight, heat sources (like ovens or radiators), and excessive humidity. Ensure there is adequate space around the unit for proper air circulation (at least 10 cm on sides and

back). The appliance should be placed on a firm, level floor that can support its weight (45 kg) when fully loaded.

3. Initial Power-On

Before plugging in, allow the humidor to stand upright for at least 2 hours. This allows the refrigerant fluids to settle. After 2 hours, plug the unit into a grounded electrical outlet. The digital display will illuminate, and the unit will begin to cool and regulate humidity.

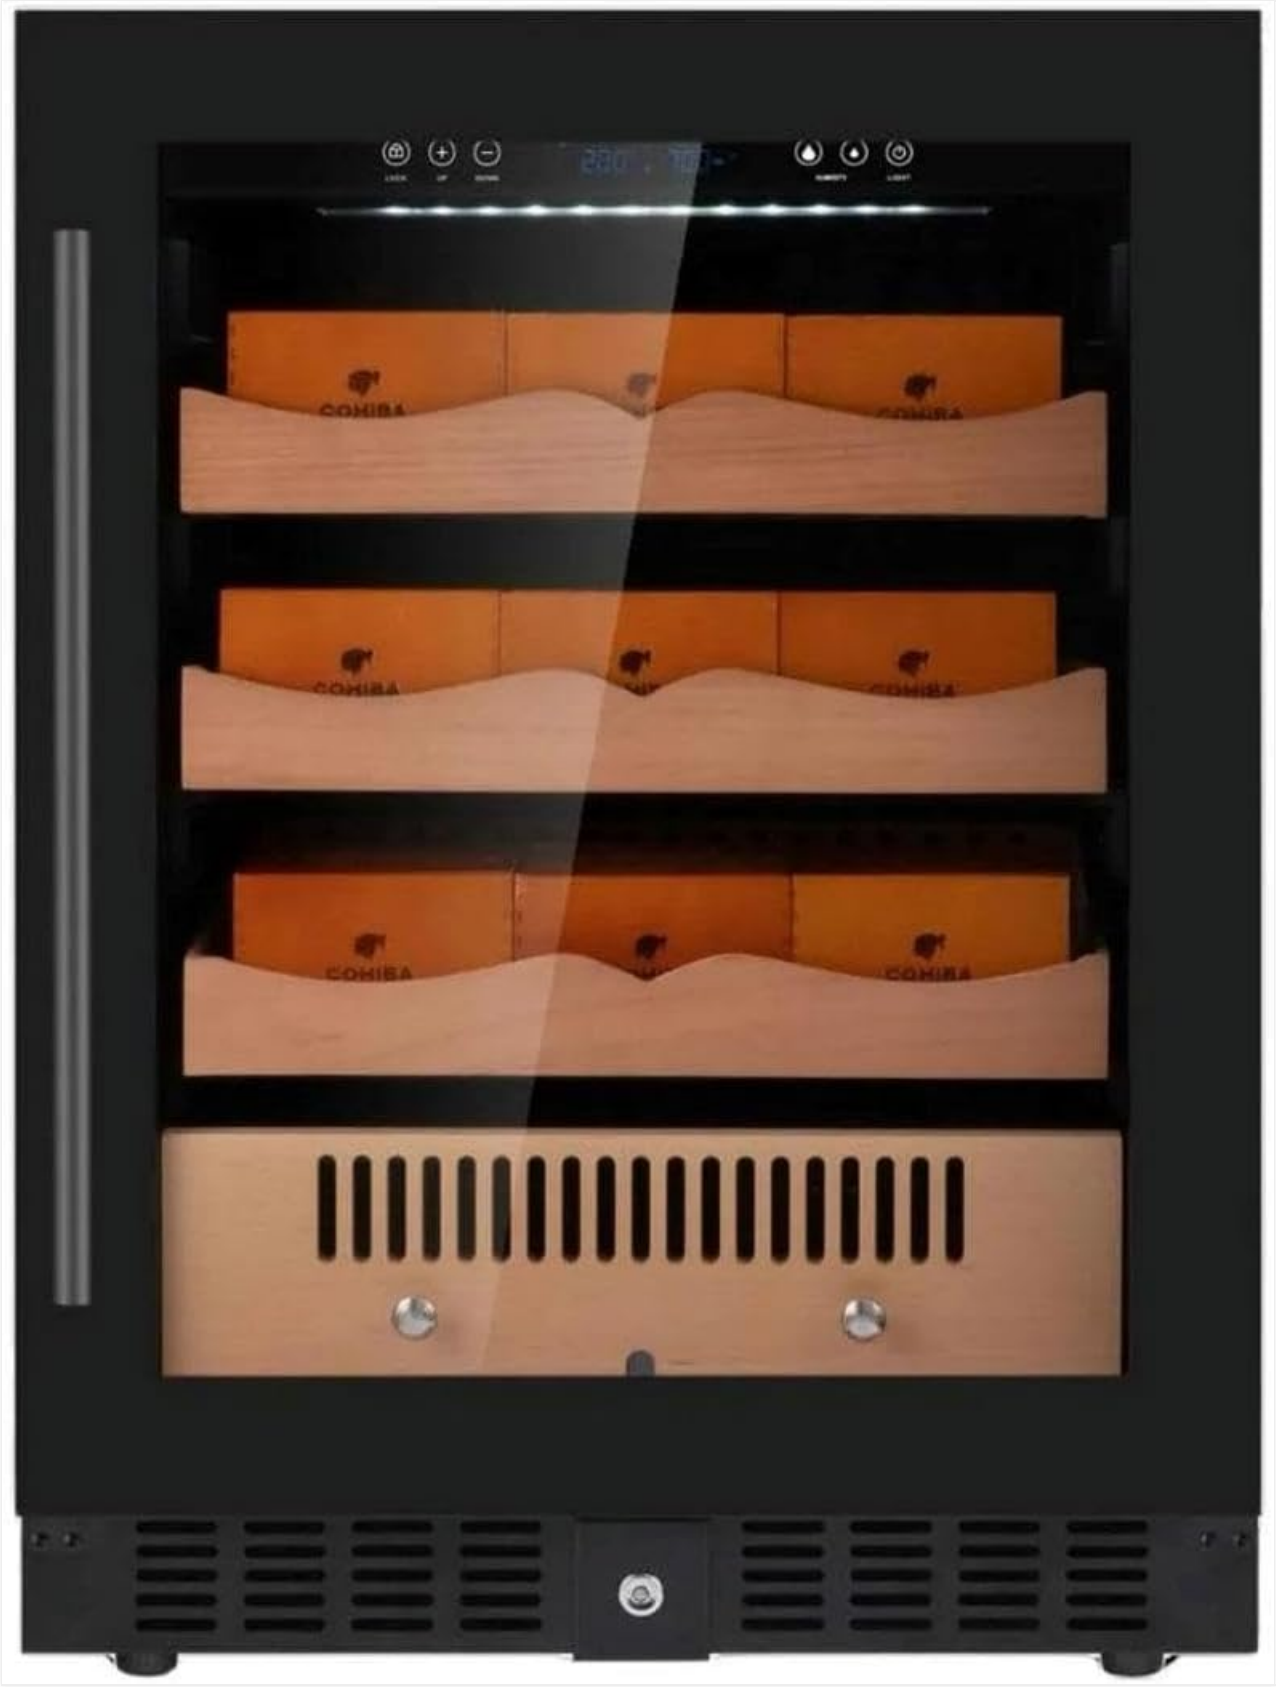

Figure 1: Front view of the La Sommeliere CIG650 Humidor. Note the sleek black exterior, UV-protected glass door, and the three visible wooden oak drawers designed to hold cigars. The control panel is located at the top of the door.

Operating Instructions

Control Panel Overview

The humidor features an LED illuminated touch control panel located at the top of the glass door. This panel allows for precise adjustment of temperature and humidity settings.

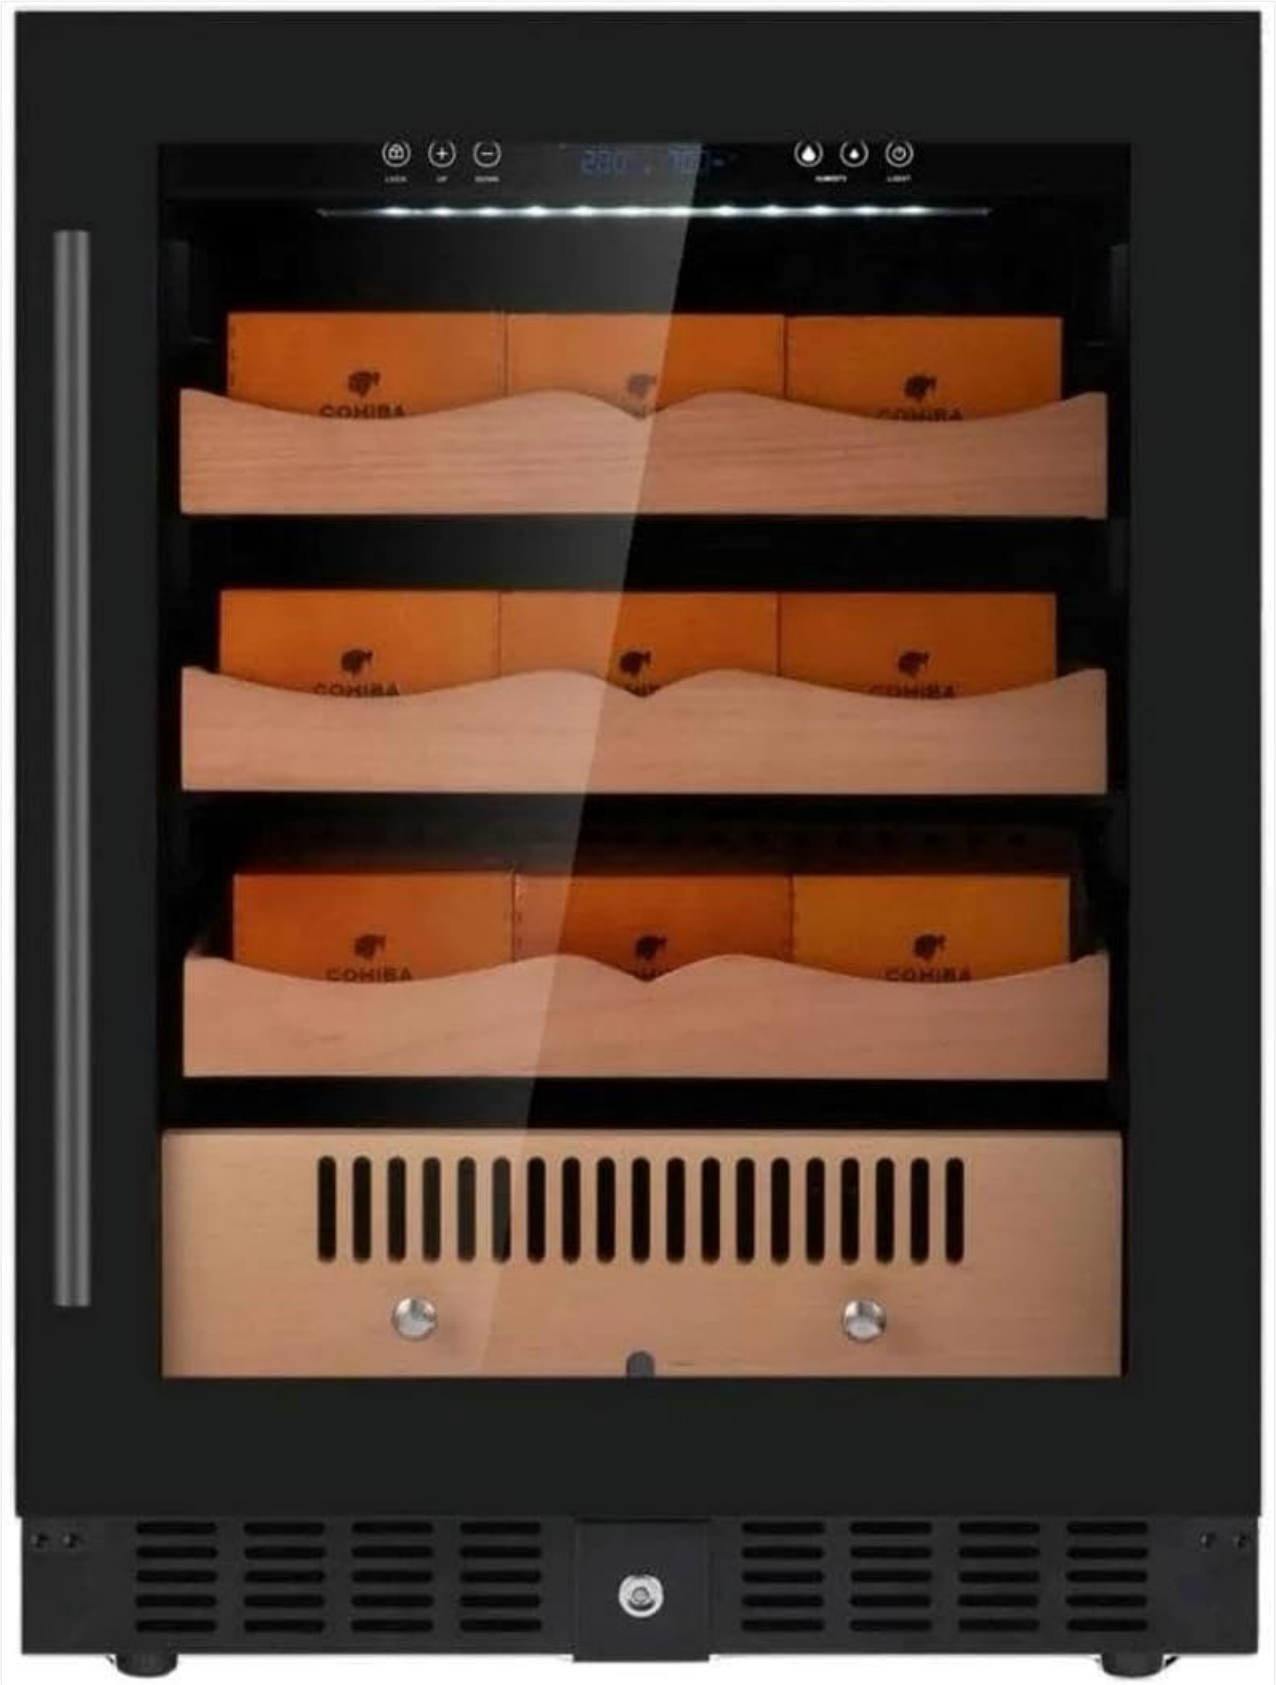

Figure 2: Detail of the touch control panel. The digital display shows current temperature and humidity. Buttons for temperature adjustment (+/-), humidity adjustment, light control, and power are visible.

1. Temperature Control

The adjustable temperature range is 18°C to 22°C. Use the **+** and **-** buttons on the control panel to set your desired temperature. The digital display will show the current and set temperatures.

2. Humidity Control

The electronic humidity control system maintains a range of 60% to 80% relative humidity. Use the dedicated humidity button (often depicted with a water droplet or humidity icon) to adjust the desired humidity level. The digital hygrometer will display the current humidity.

3. Internal Lighting

The humidor is equipped with LED internal lighting. Press the light button on the control panel to turn the internal light on or off, allowing for easy viewing of your cigars without opening the door.

4. Loading Cigars

Gently slide out the wooden oak drawers to place your cigars. Ensure cigars are not packed too tightly to allow for proper air and humidity circulation. The humidor has a capacity of approximately 650 cigars.

Maintenance

1. Cleaning the Interior

Before cleaning, unplug the humidor. Use a soft, damp cloth with mild soap and water to clean the interior surfaces. Avoid abrasive cleaners or solvents. For the wooden drawers, wipe with a dry or slightly damp cloth. Ensure the interior is completely dry before plugging the unit back in.

2. Cleaning the Exterior

Clean the exterior surfaces, including the glass door, with a soft cloth and a mild glass cleaner (for glass) or damp cloth (for cabinet). Do not spray cleaner directly onto the control panel.

3. Water Reservoir (for Humidity)

Regularly check and refill the water reservoir for the humidity system with distilled water. The frequency depends on the ambient humidity and how often the door is opened. Using distilled water prevents mineral buildup and ensures optimal performance.

4. Door Seal

Periodically inspect the door gasket for any signs of wear or damage. A proper seal is crucial for maintaining stable temperature and humidity levels. Clean the gasket with a damp cloth.

Troubleshooting

Problem	Possible Cause	Solution
Humidor does not operate	Not plugged in; Power outage; Circuit breaker tripped.	Ensure plug is secure; Check power supply; Reset circuit breaker.
Temperature/Humidity not stable	Door not closed properly; Excessive door opening; Unit placed near heat source; Water reservoir empty.	Check door seal; Minimize door openings; Relocate unit; Refill water reservoir with distilled water.

Problem	Possible Cause	Solution
Excessive noise	Unit not level; Objects touching the back of the unit.	Adjust leveling feet; Ensure clearance around the unit.
Digital display not working	Power issue; Control panel malfunction.	Check power connection; Contact customer support if problem persists.

If the problem persists after attempting these solutions, please contact customer support.
