6. MAINTENANCE AND CLEANING

Regular cleaning ensures the longevity and hygiene of your pizza oven.

- Always ensure the oven is unplugged and completely cool before cleaning.
- **Exterior Cleaning:** Wipe the stainless steel exterior with a damp cloth and mild detergent. Do not use abrasive cleaners or scouring pads, as they can scratch the surface.
- **Pizza Stone Cleaning:** The pizza stone should not be washed with soap or detergent. Scrape off any burnt-on food residue with a spatula or stiff brush. For stubborn stains, you can heat the stone in the oven at a high temperature to burn off residue, then brush it clean once cooled. The stone will naturally darken over time, which is normal and does not affect performance.
- **Interior Cleaning:** Wipe the interior surfaces with a damp cloth. Avoid getting water directly on the heating elements.
- Do not use harsh chemicals or oven cleaners on any part of the appliance.

- Store the oven in a dry, protected area when not in use.

7. TROUBLESHOOTING

If you encounter issues with your pizza oven, refer to the following common problems and solutions.

Problem	Possible Cause	Solution
Oven does not heat up.	Not plugged in; power outage; faulty outlet; temperature dial not set.	Check power connection; verify power supply; try a different outlet; ensure temperature dial is set to a heating position.
Pizza not cooking evenly.	Insufficient preheating; pizza not rotated; uneven dough thickness.	Allow full preheating time (15-20 min); rotate pizza halfway through cooking; ensure dough is uniformly thick.
Pizza crust is not crispy.	Oven not hot enough; too much moisture in toppings; pizza stone not fully heated.	Ensure oven is preheated to maximum temperature; reduce moisture in toppings; allow pizza stone to heat thoroughly.
Smoke coming from oven.	Food residue burning on stone or elements.	Clean pizza stone and interior thoroughly after each use. Ensure no food spills.

If the problem persists after trying these solutions, please contact Klarstein customer support.
