10. TROUBLESHOOTING

If you encounter issues with your thermostat, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Thermostat does not power on.	No power supply; incorrect wiring; circuit breaker tripped.	Check circuit breaker; verify wiring connections (consult professional); ensure power is restored.
Incorrect temperature reading.	Sensor obstructed; sensor faulty; thermostat placed in drafty area.	Ensure sensors are clear; reposition thermostat if necessary; contact support if sensor is suspected faulty.
Wi-Fi connection issues.	Incorrect Wi-Fi password; weak signal; router issues; thermostat not in pairing mode.	Verify Wi-Fi password; move thermostat closer to router; restart router; re-enter pairing mode and try connecting again.
Heating system not responding.	Incorrect wiring; heating system fault; thermostat not calling for heat.	Verify wiring (consult professional); check heating system's power and function; ensure thermostat is set to a temperature above current room temperature.

If the problem persists after attempting these solutions, please contact customer support or a qualified electrician.
