TROUBLESHOOTING

If you encounter issues with your KEFEYA S6 Portable Monitor, refer to the following common solutions:

- **No Signal / Black Screen:**
    - Ensure all cables (USB-C, HDMI, USB-A for power) are securely connected to both the monitor and your laptop.
    - Verify that your laptop's display settings are configured to detect and extend/mirror to an external display.
    - If using HDMI, ensure the USB-C cable is also connected for power.
    - Try connecting to a different port on your laptop or a different device to rule out port or device issues.

- **Compatibility Issues (e.g., MacBook M1/M2/M3):**
    - MacBook M1/M2/M3 models may require a docking station or a compatible H5-T hub cable for dual-screen functionality. Contact customer support for assistance with compatible accessories.

- **Image Quality Issues (Flickering, Distorted Colors):**
    - Check cable connections for looseness or damage.
    - Adjust the monitor's settings (brightness, contrast, tint) using the multifunctional button.
    - Ensure your laptop's graphics drivers are up to date.

- **No Audio:**
    - Increase the monitor's volume using the adjustment button.
