## 5. INSTALLATION INSTRUCTIONS

Follow these steps for proper installation of your FORIOUS faucet:

- 1. Prepare the Sink:** Ensure the sink hole is clean and appropriately sized for a single-hole faucet. Turn off the main water supply.
- 2. Insert Faucet Body:** Place the faucet body into the sink hole. Ensure the base gasket is correctly positioned between the faucet and the sink surface.
- 3. Secure Faucet:** From underneath the sink, slide the rubber washer, metal washer, and then the mounting nut onto the threaded shank of the faucet. Tighten the mounting nut securely using the provided tool or an adjustable wrench.
- 4. Connect Water Supply Hoses:** Attach the hot and cold water supply hoses (G 3/8) to the corresponding inlets on the faucet body. Then, connect the other ends of the hoses to your hot and cold water angle stops. Ensure the hot water line connects to the 'H' marked inlet and the cold water line to the 'C' marked inlet.
- 5. Check Connections:** Double-check all connections to ensure they are tight and secure. Avoid

overtightening.

6. **Test for Leaks:** Slowly turn on the main water supply. Check all connections for any signs of leaks. If leaks are detected, tighten the connections slightly until the leak stops.

## 7. MAINTENANCE

Regular maintenance will help preserve the appearance and functionality of your faucet:

- **Cleaning the Faucet:** The faucet features a durable five-layer nanotechnology chrome finish that resists rust and stains. Simply wipe the surface with a soft, damp cloth to maintain its clean and tidy appearance. Avoid abrasive cleaners, harsh chemicals, or scouring pads, as these can damage the finish.
- **Aerator Maintenance:** The integrated aerator should be cleaned regularly to prevent mineral buildup and maintain optimal water flow. Unscrew the aerator from the spout, rinse it under running water, and gently remove any debris. Reattach the aerator securely.
- **Ceramic Cartridge:** The faucet is equipped with a drip-free ceramic and copper disc mixer cartridge, tested for 500,000 cycles to ensure stability and prevent leaks. No regular maintenance is typically required for the cartridge itself, but if dripping occurs, it may need replacement.
