## 6.1. Fast Warming (Milk/Formula)

This mode uses steam to quickly warm milk or formula to the desired temperature, typically within 5-8 minutes.

1. Place the bottle(s) into the warming chamber.
2. Add water to the chamber, ensuring it does not exceed 600ml and is below the bottle rim.
3. Cover the unit with the protective lid.
4. Press the Power button, then select the "Fast" mode.

5. Adjust the desired temperature and time using the +/- buttons, or select the appropriate bottle volume.
6. The unit will beep when warming is complete. Carefully remove the bottle(s) using the lifting basket.

### 6.2. Water Bath Warming (Gentle Milk Warming)

This mode gently warms breastmilk or formula using a water bath, preserving nutrients by avoiding overheating.

1. Place the bottle(s) into the warming chamber.
2. Add water to the chamber, ensuring it covers the milk level in the bottle but does not overflow.

3. Cover the unit with the protective lid.
4. Press the Power button, then select the "Milk" mode.
5. Adjust the desired temperature (e.g., body temperature) and time using the +/- buttons.
6. The unit will maintain the set temperature until manually turned off or the 24H Keep Warm function is activated.

### 6.3. 24H Keep Warm

After warming, the unit can automatically keep milk or water at a preset temperature for up to 24 hours, ideal for nighttime feedings.

- This function is typically activated automatically after a warming cycle or can be set directly.
- Ensure sufficient water is in the chamber for prolonged warming.

### 6.4. Thaw (Breastmilk)

Safely thaws frozen breastmilk using a gentle water bath, preserving its nutritional value.

1. Place frozen breastmilk bags or bottles into the warming chamber.
2. Add water to the chamber, ensuring it covers the frozen milk.
3. Cover the unit with the protective lid.
4. Press the Power button, then select the "Thaw" mode (often integrated with Milk or Fast modes, refer to specific button icons).
5. Adjust the time as needed for thawing.
6. Once thawed, milk can be gently warmed to feeding temperature using the Water Bath Warming mode.

## 6.5. Steaming (Sterilization)

This function uses high-temperature steam to sterilize bottles, pacifiers, and other small baby items.

1. Place clean bottles (upside down) or other items onto the lifting basket within the chamber.
2. Add a small amount of water (e.g., 100-150ml) to the bottom of the chamber.
3. Cover the unit with the protective lid.
4. Press the Power button, then select the "Sterilize" mode.

5. The unit will generate steam to sterilize the items. The cycle duration is usually preset.
6. Allow items to cool before handling.

## 360° All-round Steaming

Maintain the bottles clean

**Image 6.4:** Steam rising from the warmer, indicating the sterilization process for baby bottles.

### 6.6. Food Heating

Warm baby food jars or containers to a comfortable temperature.

1. Place the baby food jar/container into the warming chamber.
2. Add water to the chamber, ensuring it is below the rim of the food container.

3. Cover the unit with the protective lid.
4. Press the Power button, then select the "Food" mode.
5. Adjust the desired temperature and time using the +/- buttons.
6. Stir the food and test temperature before feeding.

## Night Light Function

### 6.7. Adjustable Timer & Temperature Control

The unit allows for precise adjustment of both warming time (to 1 minute increments) and temperature (to 1°F

increments) for customized heating.

- Use the dedicated +/- buttons for time and temperature adjustments after selecting a mode.

**Image 6.6:** The digital interface highlighting the precise temperature control feature, adjustable by 1°F increments.

## 6.8. Memory Function

The memory function stores your last used settings, eliminating the need to reconfigure them for subsequent uses.

- The unit automatically saves the last temperature and time settings for convenience.

## 6.9. Night Light Function

A gentle built-in night light illuminates the control panel, making nighttime feedings easier without disturbing others.

- Press the dedicated light bulb icon button on the control panel to turn the night light on or off.

## 7. CLEANING AND MAINTENANCE

Regular cleaning ensures optimal performance and hygiene for your bottle warmer.

1. **Unplug:** Always unplug the appliance from the power outlet and allow it to cool completely before cleaning.
2. **Wipe Main Unit:** Wipe the exterior of the main unit with a damp cloth. Do not immerse the main unit in water.

3. **Wash Accessories:** The lid and bottle lifting basket can be washed with warm soapy water and rinsed thoroughly.
4. **Descaling:** Over time, mineral deposits (limescale) may build up in the heating chamber. To descale, mix 50ml of white vinegar with 100ml of cold water and pour into the heating chamber. Let it stand for 30 minutes, then pour out the solution. Rinse the chamber thoroughly with clean water. Repeat if necessary.
5. **Storage:** Store the clean and dry appliance in a cool, dry place.

## 8. TROUBLESHOOTING

If you encounter any issues with your bottle warmer, please refer to the following common problems and solutions:

- **Unit does not turn on:**
  - Ensure the power cord is securely plugged into a working electrical outlet.
  - Check if the power button has been pressed.
- **Milk/Food not warming:**
  - Verify that the correct mode and temperature settings have been selected.
  - Ensure there is sufficient water in the heating chamber.
  - Check if the lid is properly closed.
- **Warming takes too long:**
  - Ensure the "Fast" mode is selected for quicker warming.
  - Check the initial temperature of the milk/food (e.g., refrigerated items take longer).
  - Ensure the water level is appropriate for the selected mode.
- **Excessive limescale buildup:**
  - Perform the descaling procedure as described in the Maintenance section.

If the problem persists after trying these solutions, please contact customer support.
