### Water Drainage:

## 7. Troubleshooting

If you encounter issues with your unit, refer to the following common troubleshooting tips:

- **Unit not cooling effectively:** Ensure the air filter is clean and free of debris. Verify that the exhaust hose is properly connected and sealed to the window kit, and that it is not kinked or obstructed. Check that windows and doors are closed to prevent warm air from entering the room.
- **Unusual noises or odors:** If you notice any burning plastic smells or unusual loud noises, immediately power off the unit and unplug it from the power outlet. Inspect the unit for any visible damage or blockages. Contact customer support if the issue persists.
- **Unit does not turn off immediately:** Some models may have a slight delay in completely shutting down after pressing the power button. This is a normal operational characteristic.
