7. Troubleshooting

Problem	Possible Cause	Solution
Bricks do not fit securely.	Incorrect alignment or debris on studs.	Ensure bricks are aligned correctly. Clean studs and holes of both the plate and the brick.
Plate appears warped.	Exposure to high temperatures or improper storage.	Store in a cool, dry place. If warping is severe, the plate may need replacement.
Difficulty separating connected bricks.	Very tight fit (normal for new bricks) or incorrect pulling angle.	Apply steady, gentle pressure. Try wiggling slightly. Avoid using tools that could scratch or damage the plastic.
