- **Handling:** Avoid dropping the console or gamepads. Do not expose them to water or excessive moisture.
- **TF Card:** Handle the TF card carefully. Avoid removing it while the console is powered on or during game saves to prevent data corruption.
- **Batteries:** Remove batteries from gamepads if they will not be used for an extended period to prevent leakage.

6. TROUBLESHOOTING

If you encounter issues with your Game Stick 4K, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
No signal on TV / Black screen	Incorrect HDMI input selected, loose HDMI connection, insufficient power.	Ensure TV is on the correct HDMI input. Check HDMI cable connection to both TV and Game Stick. Verify the USB power cable is securely connected and receiving power. Try a different USB port or power adapter.
Gamepads not responding / Freezing	Low batteries, un-paired, wireless interference, faulty gamepad.	Replace gamepad batteries with fresh ones. Ensure the wireless receiver is properly plugged into the Game Stick. Try re-pairing the gamepads (refer to specific gamepad instructions if available, usually involves pressing a sync button). Move closer to the console to reduce interference. If issues persist, the gamepad may be faulty.
Games not loading or crashing	Corrupted TF card, software glitch, incompatible game file.	Ensure the TF card is fully inserted. Restart the Game Stick by unplugging and re-plugging the power. Avoid removing the TF card while the device is on. If a specific game consistently crashes, it might be corrupted.
Poor game performance (lag, stutter)	System overload, specific game emulation demands.	Ensure no other applications are running in the background (if applicable). Some emulated games may naturally have performance variations depending on their complexity.

If these solutions do not resolve the issue, please contact customer support for further assistance.
