1. PRODUCT OVERVIEW

The Kuvings AUTO10 Cold Press Juicer is designed for efficient and hands-free juicing of various fruits and vegetables. Featuring a powerful 240W motor and a large 3-liter batching hopper, it minimizes preparation time and maximizes juice yield. This appliance is capable of producing fresh juice, smoothies, nut milk, and sorbets.

Figure 1.1: Front view of the Kuvings AUTO10 Cold Press Juicer.

The AUTO10 model emphasizes convenience with its auto-cutting blade and redesigned pulp chute, aiming to simplify the juicing process and subsequent cleanup. Its robust construction ensures durability and consistent performance for a variety of healthy beverages.

2. IMPORTANT SAFETY PRECAUTIONS

READ ALL INSTRUCTIONS BEFORE USE.

- Always unplug the juicer from the power outlet when not in use, before assembling or disassembling parts, and before cleaning.
- Do not immerse the motor base in water or other liquids. Clean only with a damp cloth.
- Keep hands and utensils away from moving parts during operation to prevent injury.
- Ensure all parts are correctly assembled and locked into place before operating the juicer.
- Do not operate the juicer if the power cord or plug is damaged, or if the appliance malfunctions or has been dropped or damaged in any manner. Contact customer service for assistance.
- This appliance is not intended for use by persons with reduced physical, sensory, or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.
- Do not use attachments not recommended or sold by the manufacturer.

- Do not use the appliance outdoors.
- Do not let the cord hang over the edge of a table or counter, or touch hot surfaces.
- Avoid contact with sharp blades. Exercise extreme caution when handling and cleaning the juicing screen and cutting blade.
- Do not process frozen fruits or vegetables directly without thawing, as this can damage the auger and screen.

3. PRODUCT COMPONENTS AND PACKAGE CONTENTS

The Kuvings AUTO10 Juicer comes with several key components designed for optimal performance and ease of use. Please ensure all parts are present and undamaged upon unboxing.

Figure 3.1: All major components of the Kuvings AUTO10 Juicer.

Package Contents:

- Motor Base
- Hopper (3-liter capacity with auto-cutting blade)

- Drum Lid
- Auger (Squeezing Screw)
- Juicing Screen (Fine screen for juice)
- Smoothie Screen (for thicker beverages)
- Sorbet Screen (for frozen desserts)
- Rotation Wiper
- Pulp Outlet
- Juice Outlet with Smart Cap
- Pulp Container
- Juice Container
- Cleaning Brush
- Specialized Cleaning Tool
- User Manual (this document)

4. ASSEMBLY AND SETUP

Before first use, wash all removable parts thoroughly with warm, soapy water. Rinse and dry completely. Ensure the motor base is unplugged during assembly.

1. **Place the Motor Base:** Position the motor base on a stable, flat, and dry surface.
2. **Assemble the Drum:** Place the rotation wiper into the drum. Then, insert the desired screen (juicing, smoothie, or sorbet) into the rotation wiper assembly.
3. **Insert the Auger:** Place the auger into the center of the assembled drum and screen, ensuring it sits firmly.
4. **Attach the Hopper:** Align the hopper with the drum assembly. The hopper features an auto-cutting blade. Carefully lower the hopper onto the drum, aligning the arrows or indicators, and twist clockwise until it locks securely into place. You should hear a click.
5. **Position Containers:** Place the pulp container under the pulp outlet and the juice container under the juice outlet.
6. **Connect Power:** Plug the power cord into a grounded electrical outlet. The juicer is now ready for operation.

5. OPERATING INSTRUCTIONS

5.1 Ingredient Preparation

While the AUTO10 features a hands-free design and auto-cutting blade, some preparation is still recommended for optimal results and to prolong the life of your juicer.

- Wash all fruits and vegetables thoroughly.
- Remove large seeds (e.g., peach, mango, avocado pits) and hard pits from fruits.
- For fibrous vegetables like celery or kale, it is advisable to cut them into shorter lengths (approx. 1-2 inches) to prevent tangling.
- Hard ingredients like carrots or beets can be placed whole into the hopper.
- Citrus fruits should be peeled before juicing.

Figure 5.1: Hopper filled with various ingredients ready for juicing.

5.2 Juicing Process

1. Ensure the Smart Cap on the juice outlet is closed if you wish to mix juice inside the drum or prevent drips.
2. Place prepared ingredients into the 3-liter hopper. You can fill it completely for batch juicing.
3. Close the hopper lid securely. The juicer will not operate if the lid is not properly closed and locked.
4. Press the "ON" button to start the juicing process. The auto-cutting blade will begin to process the ingredients, and the auger will slowly press them.
5. Juice will flow into the juice container, and pulp will be expelled into the pulp container.
6. Once juicing is complete, or if you need to pause, press the "OFF" button.
7. Open the Smart Cap to dispense the juice into your glass.

Beyond Juice, Beyond Limits

For 40 years, Kuvings has been a trusted brand for quality products and appliances, allowing you to create blends in the comfort of your home.

Kuvings®

5.3 Using Different Screens (Smoothie & Sorbet)

The Kuvings AUTO10 includes specialized screens for versatility:

- **Smoothie Screen:** Use this screen for making thicker beverages like smoothies. For best results, use softer fruits and vegetables, and you may add a small amount of liquid (water, nut milk) to aid processing.
- **Sorbet Screen:** This screen is designed for making frozen desserts. Use slightly thawed frozen fruits. Do not use fully frozen, rock-hard ingredients as this can damage the auger and screen.

Always ensure the correct screen is installed during assembly for your desired output.

6. MAINTENANCE AND CLEANING

Regular cleaning is essential to maintain the performance and longevity of your Kuvings AUTO10 Juicer. Clean the juicer immediately after each use.

1. **Unplug the Juicer:** Always unplug the appliance from the power outlet before cleaning.
2. **Disassemble Parts:** Remove the hopper, drum assembly (with screen and auger), juice container, and pulp container from the motor base.
3. **Rinse Immediately:** Rinse all removable parts under running water to remove most of the pulp and juice residue.
4. **Clean with Brush:** Use the provided cleaning brush and specialized cleaning tool to thoroughly clean the juicing screen, auger, and inside the drum. Pay special attention to the small mesh holes of the screen to ensure they are clear of pulp.
5. **Wash with Soap:** Wash all removable parts with warm, soapy water.
6. **Rinse and Dry:** Rinse all parts thoroughly with clean water and allow them to air dry completely before reassembling or storing.
7. **Clean Motor Base:** Wipe the motor base with a damp cloth. Never immerse the motor base in water.
8. **Smart Cap Cleaning:** The Smart Cap can be detached for easier cleaning. Ensure it is reattached securely after cleaning.

Proper cleaning helps prevent staining and ensures hygienic operation.

7. TROUBLESHOOTING GUIDE

If you encounter issues with your Kuvings AUTO10 Juicer, refer to the following common problems and solutions:

Problem	Possible Cause	Solution
Juicer does not turn on.	Not plugged in; parts not assembled correctly; safety lock not engaged.	Ensure power cord is securely plugged in. Check that the hopper is fully locked onto the drum and the drum is correctly seated on the motor base.
Excessive vibration or noise.	Parts not assembled correctly; hard ingredients; foreign object.	Disassemble and reassemble all parts, ensuring they are properly aligned. Avoid feeding excessively hard or frozen ingredients. Check for any foreign objects.
Pulp is wet or juice yield is low.	Screen clogged; ingredients too soft or overfed; Smart Cap closed.	Clean the juicing screen thoroughly. Feed ingredients at a steady pace, do not overfill. Ensure the Smart Cap is open during juicing.
Pulp chute is clogged.	Fibrous ingredients; overfeeding; insufficient water content.	Cut fibrous ingredients into smaller pieces. Feed ingredients slowly. Alternate soft and hard ingredients. Use the reverse function briefly if available (check manual for specific model).
Motor stops during operation.	Overload protection activated; motor overheating.	Turn off the juicer and unplug it. Remove any jammed ingredients. Let the motor cool down for at least 30 minutes before restarting. Reduce batch size for very hard ingredients.

If the problem persists after attempting these solutions, please contact Kuvings customer service.

8. PRODUCT SPECIFICATIONS

Feature	Detail
Model Name	AUTO10
Model Number	AUTO10W
Brand	Kuvings
Type	Cold Press Masticating Juicer

Feature	Detail
Motor Power	240 Watts
Voltage	120 Volts
Hopper Capacity	3 Liters (approx. 100 Ounce)
Product Dimensions (D x W x H)	8.15"D x 10"W x 18.07"H
