OPERATING INSTRUCTIONS

Using AC Outlets

Plug your devices directly into the 4 AC outlets. Ensure the total power consumption of all connected AC devices does not

exceed 1875W (15A/125V) to prevent overload.

Using USB Ports

Connect your USB-C compatible devices to the USB-C port for 20W fast charging. Use the 3 USB-A ports for other USB-powered devices. The power strip features intelligent power allocation, which automatically adjusts the output to optimize charging for connected devices.

Overload Protection Switch

The power strip is equipped with an overload protection switch. If the total current of connected devices exceeds 15A, the switch will automatically trip to protect your devices from damage. To reset, unplug some devices, then press the switch back to the ON position.

MAINTENANCE

- **Cleaning:** Disconnect the power strip from the wall outlet before cleaning. Use a dry, soft cloth to wipe the surface. Do not use liquid cleaners or aerosols.
- **Storage:** When not in use for extended periods, unplug the power strip and store it in a cool, dry place.

- **Inspection:** Regularly inspect the power cord and the unit for any signs of damage, such as frayed wires or cracked casing. If damage is found, discontinue use immediately and contact support.

TROUBLESHOOTING

- **No Power:**

- Ensure the power strip is securely plugged into a working wall outlet.
- Check if the On/Off switch is pressed to the ON position.
- If the overload protection switch has tripped, reduce the load by unplugging some devices and then reset the switch.

- **Devices Not Charging via USB:**

- Verify that the USB cables are properly connected to both the power strip and the device.
- Ensure the device is compatible with the power output of the USB ports.
- Try connecting a different device or cable to rule out device/cable issues.

- **Slow Charging:**

- Ensure your device supports fast charging protocols (PD3.0, QC3.0, FCP, AFC) to utilize the 20W USB-C port's full potential.
- When multiple USB ports are in use, the total power is shared, which may result in slower charging for individual devices.
