Connecting to Devices:

The WUAWE portable monitor offers versatile connectivity options:

1. USB-C to USB-C Connection (Single Cable Solution):

For devices with a full-featured USB-C port (supporting DisplayPort Alternate Mode and power delivery), use the included USB-C to USB-C cable. This single cable can transmit both video signal and power to the monitor.

TROUBLESHOOTING

Problem	Possible Cause	Solution
No display/"No Signal" message	Incorrect input source selected; Cable not properly connected; Device not outputting video; Insufficient power.	Check cable connections (USB-C, HDMI). Ensure your device's USB-C port supports DP Alt Mode. Select the correct input source via the OSD menu. Ensure the monitor is receiving sufficient power. Restart your connected device.
Screen flickering/Unstable display	Loose cable connection; Power fluctuations; HDR mode issues.	Ensure cables are securely connected. Try a different power outlet or adapter. If using HDR, try disabling it in the OSD menu or on your device, as SDR often provides a more stable image.
No sound from speakers/headphone jack	Volume too low; Muted; Incorrect audio output selected on device.	Increase volume via the OSD menu or your connected device. Check if the monitor or device is muted. Ensure the monitor is selected as the audio output device on your computer/console.
Monitor not turning on	No power; Faulty power cable/adapter.	Verify power connection. Try a different power outlet. Ensure the power button is pressed.
Image is washed out or colors are incorrect	Incorrect color settings; HDR mode enabled.	Adjust color settings in the OSD menu. If HDR is enabled, try disabling it, as some users report better color accuracy in SDR mode.
